Mike Stevenson,2014-10-16 In this book we guide you step by step to setup your first website or blog with Wordpress Thanks to WordPress publishing a website has never been this easy Unlike before ordinary internet users can now create websites with little knowledge about HTML or any scripting language What is WordPress anyway WordPress is a Content Management System or CMS program built in PHP CMSs are web applications that as the name suggests manage website content such as blog posts images and even videos To make it simple it is like a big website template that has been premade for you not to bother creating or writing lines of code All you need to do are to customize it with the help of intuitive graphical interfaces and tools then input the content that you want to display on your website If WordPress is just one of the many CMSs out there in the web why choose WordPress instead of the other CMSs Well few of the biggest factors why many people prefer WordPress are simplicity wide array of customization popularity and the community The simplicity of WordPress is ideal for those who have little idea on how the web works and have little knowledge when it comes to web development With its user friendliness almost everybody can master using WordPress in no time However it does not mean that WordPress is only ideal for beginners WordPress has advanced features and customizations that even most veteran web developers would appreciate Not to mention that creating WordPress sites for them is like a walk in the park With advanced knowledge in CSS HTML and WordPress template tags they can transform an ordinary looking WordPress blog into one of the most complex websites on the web And they can do that without spending too much time changing the internal workings of WordPress or developing additional client or server side scripts to manage the content they want to display Popularity and the community are additional bonuses that most WordPress users appreciate With a large community bugs and issues can be collected immediately and be fixed as fast as the developers can On the other hand the same community acts as WordPress primary support group If you got trouble or something you want to know you can just go to WordPress forums and ask it Within

minutes or days in some occasion you will get an answer right away On the other hand with many developers indulging themselves with WordPress the number of plugins and themes available on the market steadily increases Due to that WordPress can be customized in more ways than one Also the plugins make it possible for users to get the functionalities they want fast without of course developing by their own All they need to do is go the plugins section of their dashboard search for a plugin and install it Within minutes the plugin will be live and working If you were convinced to get WordPress and use it for your website then this book is for you It contains basic as well as some advanced topics on how you can take full advantage of WordPress tags wordpress wordpress for dummies wordpress for beginners blogging blogging for beginners website website design *WordPress for Beginners* James J. Burton,2014-04 All it takes to create a website using WordPress are five simple steps at the end of which you will have a search engine optimized responsive and visitor friendly website This guide divides the whole process of creating a website into five easy to follow steps It starts with laying out the basic terminologies followed by registering your domain name and selecting a hosting service Next you will be installing the necessary items creating content configuring your website and finally market your web content With this guide anyone can make great websites You need no experience in coding or professional web development all you will be required to do is read type and click **WordPress 3.2 Theme Design** Tessa Blakeley Silver,2013 A Beginner s Guide packed with clear step by step instructions to create powerful and professional themes for your WordPress website This book targets WordPress users and visual designers who are used to working with the common industry standard tools like PhotoShop and Dreamweaver or other popular graphic HTML and text editors No server side scripting or programming experience is required
