constructs its information technology infrastructure Cloud computing is the result of the gradual development of these technologies None of the technologies that go into cloud computing reflect anything fundamentally unique This is comparable to the condition of the World Wide Web only a little more than a decade ago In the same way that the majority of the technologies that make up cloud computing have been around for quite some time the majority of the technologies that built up the World Wide Web have been around for decades before Netscape came along and made them accessible Cloud computing and the World Wide Web are both examples of this These were made accessible to the general public for the first time solely due to Amazon.com When it comes to the deployment of their applications the purpose of this book is to provide developers of transactional web apps with the knowledge and skills essential to make the most of cloud infrastructure This book has a stronger emphasis on cloud computing as it relates to Amazon EC2 than it does on cloud computing as it relates to Google Gmail
