Learn JDBC By Example: A Quick Start Guide to MariaDB and SQL Server Driven Programming Vivian Siahaan, Rismon Hasiholan Sianipar, 2019-11-24 This book explains relational theory in practice and demonstrates through two projects how you can apply it to your use of MariaDB and SQL Server databases. This book covers the important requirements of teaching databases with a practical and progressive perspective. This book offers the straightforward practical answers you need to help you do your job. This hands on tutorial reference guide to MariaDB and SQL Server is not only perfect for students and beginners but it also works for experienced developers who aren't getting the most from MariaDB and SQL Server. As you would expect this book shows how to build from scratch two different databases MariaDB and SQL Server using Java. In designing a GUI and as an IDE you will make use of the NetBeans tool. In chapter one you will learn the basics of cryptography using Java. Here you will learn how to write a Java program to count Hash MAC Message Authentication Code, store keys in a KeyStore, generate PrivateKey and PublicKey, encrypt/decrypt data and generate and verify digital prints. You will also learn how to create and store salt passwords and verify them. In chapter two you will create a PostgreSQL database named Bank and its tables. In chapter three you will create a Login table. In this case you will see how to create a Java GUI using NetBeans to implement it. In addition to the Login table in this chapter you will also create a Client table. In the case of the Client table you will learn how to generate and save public and private keys into a database. You will also learn how to encrypt/decrypt data and save the results into a database. In chapter four you will create an Account table. This account table has the following ten fields: account_id (primary key), client_id (primary key), account_number, account_date, account_type, plain_balance, cipher_balance, decipher_balance, digital_signature, and signature_verification. In this case you will learn how to implement generating and verifying digital prints and storing the results into a database. In chapter five you will create a table named Client_Data which has seven columns: client_data_id (primary key), account_id (primary key), birth_date, address, mother_name, telephone, and photo_path. In chapter six you will be taught how to create a SQL Server database named Crime and its tables. In chapter seven you will be taught how to extract image features utilizing BufferedImage class in Java GUI. In chapter eight you will be taught to create Java GUI to view, edit, insert and delete Suspect table data. This table has eleven columns: suspect_id (primary key), suspect_name, birth_date, case_date, report_date, suspect_status, arrest_date, mother_name, address, telephone, and photo. In chapter nine you will be taught to create Java GUI to view, edit, insert and delete Feature_Extraction table data. This table has eight columns: feature_id (primary key), suspect_id (foreign key), feature1, feature2, feature3, feature4, feature5, and feature6. In chapter ten you will add two tables: Police_Station and Investigator. These two tables will later be joined to Suspect table through another table File_Case which will be built in the seventh chapter. The Police_Station has six columns: police_station_id (primary key), location, city, province, telephone, and photo. The Investigator has eight columns: investigator_id (primary key), investigator_name, rank, birth_date, gender, address, telephone, and photo. Here you

will design a Java GUI to display edit fill and delete data in both tables In chapter eleven you will add two tables Victim and File_Case The File_Case table will connect four other tables Suspect Police_Station Investigator and Victim The Victim table has nine columns victim_id primary key victim_name crime_type birth_date crime_date gender address telephone and photo The File_Case has seven columns file_case_id primary key suspect_id foreign key police_station_id foreign key investigator_id foreign key victim_id foreign key status and description Here you will also design a Java GUI to display edit fill and delete data in both tables Finally this book is hopefully useful and can improve database programming skills for every Java MariaDB SQL Server programmer
