

Volkswagen Transporter T5 Electrical Systems

- Securely attach red crocodile clip -1- to battery negative terminal clamp, and secure measuring cable against slipping off.
- Loosen threaded connector -2- of battery earth strap on vehicle body, and remove battery earth strap.
- Read measured value.
- After measurement, tighten threaded connector again to specified torque.

Performing measurement as per procedure 2:

- Loosen securing nut of battery negative terminal clamp, but do not remove battery negative terminal clamp.
- Press red test probe -1- firmly onto battery negative terminal -2-, so that it rests against the front edge.
- Carefully lift battery negative terminal clamp -3- until it does not make any contact with battery negative terminal. When doing so, it is essential to ensure that the test probe is firmly pressed onto battery negative terminal.
- Read measured value.
- After measurement, reattach battery terminal clamp, and tighten threaded connection to specified torque = Electrical system, Fig. 91-27 / Disconnecting and connecting battery

2.6.3 No-load current measurement on fuses

- Print out fuse assignment diagram contained in current flow diagram in order to note the voltage values.

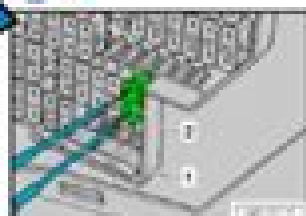

The following settings must be performed prior to carrying out the current measurement in order to be able to observe the total no-load current during the measurement:

- Set vehicle diagnostic tester to Multimeter mode.
- Calibrate 100 A pick-up clamp, and clamp it to battery negative wire (when you are using a 50 A pick-up clamp, please note that incorrect measurements might occur due to a fault in measurement amplifier).
- Switch hand-held multimeter - V.A.G 1594 B- to "V" mode (direct voltage measurement mode).
- Select the red and pointed test probes from auxiliary measuring set - V.A.G 1594 C-, and connect them.
- Hold test probes -1- against both fuse contacts -2-.
- Read measured value in mA, also shown on diagram.
- Convert entered milliamperage value to amperage values as per table below.

Note

If the voltage is < 10 V, the voltage is too low.

- Release and disconnect electrical connector of DF cable -1-, and pull off protective cap -2-.

- Unbolt battery positive cable -1- from the alternator.
- Mark drive shaft of the drive coupling.

The alternator must not be separated from the alternator bracket. The connection between alternator and bracket must be maintained. If the connection is to be removed, remove, install or renew alternator together with bracket.

- Unscrew securing bolts -arrows- of alternator bracket.
- Put alternator off alternator drive on cylinder block. Remove alternator and secure drive coupling downwards.

Installation

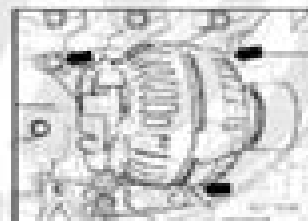

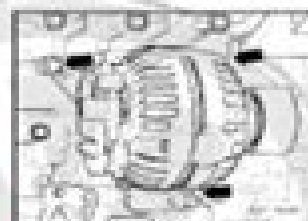

Installation is performed in the reverse order of removal; when doing this, note the following:

- Tighten threaded connectors to specified torque **25 N·m (18.4 lb-ft) (V.A.G 1594 C, Fig. 91-27)**.
- Check that drive sleeves for carrying of alternator bracket (cylinder block and an optional compressor/cylinder block) are present; insert (if applicable).
- Screw in and tighten securing bolts -arrows- of alternator bracket.

Note

Bolt inserted during removal of torque reaction support and support bearing must always be renewed.
