Engineering Geology of Groundwater in Design and Construction: Engineering Group Working Party Report I.J. Duncan, U.L. Lawrence, 2025-09-16

The majority of ground engineering projects encounter water in one way or another. Delays and unforeseen costs inevitably follow when that encounter is unexpected and the impacts can affect a surprisingly large area. To understand and manage the risks associated with groundwater, expertise is required in the areas of hydrogeology, hydrology, engineering geology, land quality, risk management, communication and planning. In view of the wider context that groundwater plays in support of our society, economy and environment, this Engineering Group Special Publication has been produced, offering best practice guidance and providing a general overview of groundwater in engineering geology, including modelling, risks and management. This book provides a state of the art review and guidance for the management of risks associated with groundwater during design and construction of engineering projects. Engineering Geology of Groundwater in Design and Construction is intended to be practical, informative and to be of use to a wide spectrum of readers from a diversity of backgrounds and employments. Slope Engineering for Mountain Roads Gareth J. Hearn, 2011. Provides a complete guide to the study, design, construction and management of landslide and slope engineering measures for mountain roads with emphasis on low cost. The geographical focus is on the tropics and sub tropics but is also highly relevant to other regions where heavy rain, steep slopes and weak soils and rocks combine to create slope instability. The causes and mechanisms of landslides are described and the hazards they pose to mountain roads are illustrated. Methods of desk study, field mapping and ground investigation are reviewed and illustrated with emphasis on geomorphological and engineering geological techniques. The design and construction of alignments, earthworks, drainage, retaining structures, the stabilization of soil slopes and rock slopes and the control of erosion on slopes and in streams covered. Slope management as part of road maintenance and operation is reviewed and procedures for risk assessment and works prioritization are described.
