Concert Tickets Sleep Hacks Update:

Nightwork, updated edition Institute Historian T. F. Peterson, 2011-03-11 A lively introduction to MIT hacks from the police car on the Great Dome to the abduction of the Caltech cannon An MIT hack is an ingenious benign and anonymous prank or practical joke often requiring engineering or scientific expertise and often pulled off under cover of darkness instances of campus mischief sometimes coinciding with April Fool s Day final exams or commencement It should not be confused with the sometimes non benign phenomenon of computer hacking Noteworthy MIT hacks over the years include the legendary Harvard Yale Football Game Hack when a weather balloon emblazoned MIT popped out of the ground near the 50 yard line the campus police car found perched on the Great Dome the apparent disappearance of the Institute president s office and a faux cathedral complete with stained glass windows organ and wedding ceremony in a lobby Hacks are by their nature ephemeral although they live on in the memory of both perpetrators and spectators *Nightwork* drawing on the MIT Museum s unique collection of hack related photographs and other materials describes and documents the best of MIT s hacks and hacking culture This generously illustrated updated edition has added coverage of such recent hacks as the cross country abduction of rival Caltech s cannon a prank requiring months of planning intricate choreography and last minute improvisation a fire truck on the Dome that marked the fifth anniversary of 9 11 and numerous pokes at the celebrated Frank Gehry designed Stata Center and even a working solar powered Red Line subway car on the Great Dome Hacks have been said to express the essence of MIT providing as alumnus Andre DeHon observes an opportunity to demonstrate creativity and know how in mastering the physical world What better way to mark the 150th anniversary of MIT s founding than to commemorate its native ingenuity with this new edition of *Nightwork* [Turn Left at the Sleeping Dog](#) John Pen La Farge, 2006-11 The interviews collected in this book preserve the old Santa Fe the one people are still looking for The interviewees represent a cross section of Santa Fe during the best of times native Santa Feans both Spanish American and Anglo artists immigrants those who came by accident those who came intending to stay those who fought to preserve the older cultures traditions and values **Motor Age** ,1911 [Railway International Passenger and Ticket Agents Journal](#) ,1906 *Billboard Music Week* ,1929 *Billboard* ,1984-11-10 In its 114th year *Billboard* remains the world s premier weekly music publication and a diverse digital events brand content and data licensing platform *Billboard* publishes the most trusted charts and offers unrivaled reporting about the latest music video gaming media digital and mobile entertainment issues and trends **Circle** ,1908 [The Argonaut](#) ,1918 *The Northwestern Miller* ,1911 [Kinect Open Source Programming Secrets : Hacking the Kinect with OpenNI, NITE, and Java](#) Andrew Davison, 2012-04-18 Program Kinect to do awesome things using a unique selection of open source software The Kinect motion sensing device for the Xbox 360 and Windows became the world s fastest selling consumer electronics device when it was released 8 million sold in its first 60 days and won prestigious awards such as Gaming Gadget of the Year Now Kinect Open Source Programming Secrets lets

YOU harness the Kinect's powerful sensing capabilities for gaming science multimedia projects and a mind boggling array of other applications on platforms running Windows Mac OS and Linux Dr Andrew Davison a user interface programming expert delivers exclusive coverage of how to program the Kinect sensor with the Java wrappers for OpenNI and NITE which are APIs created by PrimeSense the primary developers of the Kinect's technology Beginning with the basics depth imaging 3D point clouds skeletal tracking and hand gestures the book examines many other topics including Kinect gaming FFAST style gestures that aren't part of standard NITE motion detection using OpenCV how to create gesture driven GUIs accessing the Kinect's motor and accelerometer and other tips and techniques Inside Free open source APIs to let you develop amazing Kinect hacks for commercial or private use Full coverage of depth detection camera and infrared imaging point clouds Kinect gaming 3D programming gesture based GUIs and more Online access to detailed code examples on the author's web site plus bonus chapters on speech recognition beamforming and other exotica From the Author Why Buy This Book I can suggest four reasons for buying this book It offers a unique choice of Kinect programming tools It explains the official Java wrappers for those tools It covers topics not found elsewhere It provides depth but with brevity Unique Programming Tools This is the only book on programming the Kinect using the OpenNI library NITE and Java as of April 2012 when this book went to press Official Java Wrappers This is the only book that explains the official Java wrappers for OpenNI and NITE again as of April 2012 By official I mean that these bindings were developed by PrimeSense Obvious advantages of Java include object orientation cross platform support availability for free and many people including you probably knowing how to program with it Most important programming in Java gives you access to a massive number of libraries for graphics networking and beyond that can be linked to the Kinect without much effort For example I'll demonstrate how to use the Java 3D graphics library and the Java binding for the OpenCV computer vision package The main drawback of using the PrimeSense Java wrappers is their lack of documentation As I explain in Chapter 1 I had to decompile the libraries JAR files and work out the correspondences between the Java source and the somewhat better documented C OpenNI NITE APIs This is why including Secrets in the book's title isn't too excessive A Wide Range of Topics This book covers programming topics not found elsewhere I start off with the basics of course with chapters on depth infrared and RGB imaging point clouds skeletal user tracking hand tracking and gesture support Moving beyond that I cover several novel and unusual features including the following Kinect gaming based around a version of the classic Breakout video game Controls for the Kinect motor LED and accelerometer which are not part of the standard OpenNI API In fact their absence is often held up as a serious drawback of the API It's actually quite easy to add these capabilities using a custom built USB driver 3D graphics programming in the point cloud and skeletal tracking examples using Java 3D A computer vision example that demonstrates how to link the Kinect to the popular and powerful OpenCV library The creation of new body gestures inspired by the FFAST system which are not part of the limited NITE repertoire A new type of GUI component controlled by hand gesturing illustrated with three

examples a button dial and slider These components are controlled without the help of mouse or keyboard Depth with Brevity This book describes a lot of complicated code but unlike some rather hefty programming tomes you won't find all the code tediously printed on these pages Instead you can download it from the book's website In addition I've been adding supplementary chapters to the website including ones discussing speech recognition and the Kinect microphone array
