 the subject Engineering Computer Engineering grade 1 0 University of Siegen language English abstract Addressing children  
 s needs and interests is crucial when designing and developing computational devices for this user group Different  
 approaches to include children in the design process such as Participatory Design have been investigated and applied in past  
 research A way to engage children as active design partners is to let them build and reconfigure their own devices  
 Construction kits as they have been developed by researchers in the past enable children to do so Several application  
 scenarios for why children would build their own handhelds and wearable computers with different construction kits have  
 been identified in past research The hardware and software components that were included in developed kits as well as the  
 way they were used and evaluated varied widely This paper outlines the evolution of the investigation and application of  
 construction kits in the research field of wearable computers for children By referring to approaches and findings presented  
 in related work this paper aims to highlight the potential of using these insights as a basis for future investigations and user  
 centered design processes Despite the technological advances it is argued that design and development processes for  
 wearable computers for children can benefit from past research      Collier's Hansi,1908      **Better Homes and Gardens**
