Supporting Early Mathematical Development Practical Approaches To Play Based Learning:

Supporting Early Mathematical Development Caroline McGrath, 2025-10-14 Supporting Early Mathematical Development is an essential text combining theory and practice to enable successful mathematical education for children from birth to 12 years. This text considers how students, academics, parents and professionals can develop their mathematical thinking practice whilst acknowledging there will always be a road yet to travel we will always be practising the craft of teaching mathematics. Charting the delivery of mathematical development in playgroups, children's centres, nurseries and primary schools, the book promotes an effective pedagogy for mathematics. This new edition provides a conceptualisation of mathematics and places a fresh emphasis on mathematical literacy to empower children. New chapters include the following:

Mediators of Mathematical Thinking, Understanding Pattern, Pre Algebraic and Algebraic Thinking, Naming, Renaming and Processing, Numbers, Statistics, Statistical Diagrams and Probability, Measure, Geometry. Throughout the book, Caroline McGrath navigates the complexity of teaching and learning mathematics through careful thought and consideration of mediators of mathematical thinking. This supportive book is designed for educators who want to know how to reconstruct mathematical ideas with children and respond in the moment. Returning to the root of understanding using the adaptive pedagogical style recommended in this text, you can create satisfying mathematical experiences for children.

Teaching Mathematics through Story Caroline McGrath, 2014-06-27 How do you make mathematics relevant and exciting to young children? How can mathematics and literacy be combined in a meaningful way? How can stories inspire the teaching and learning of mathematics? This book explores the exciting ways in which story can be used as a flexible resource to facilitate children's mathematical thinking. It looks at the potential relationship between story and mathematics and practically demonstrates how they can be combined to help children connect, understand and express mathematical ideas using story language. Written for all early years practitioners and students, the book offers a playful pedagogical approach to facilitating children's mathematical thinking which brings a creative satisfaction and confidence to teaching mathematics. Encouraging a creative approach to teaching mathematics that draws on picture books and oral mathematical stories, the book shows you how to move from reading to telling stories with mathematical themes. Encourage children to pose and solve problems by playing with the plot of stories. Enable children to translate abstract mathematical ideas to concrete representations with supporting story props and puppets. Create original oral mathematical stories alongside children. Capture children's mathematical thinking in an observational framework supported with audio or video recordings which can be shared with parents and colleagues. There are free audio recordings of children and adults telling oral mathematical stories which feature in the book. These can be downloaded from www.routledge.com/9780415688154. This book draws on practical work with children, educators, parents, professional storytellers and trainee practitioners who bring theoretical ideas to life and offer insight into their mathematical story experiences. It is a must have for all those who want to make mathematics relevant.

Derek Haylock,Anne D Cockburn,2017-02-08 Having a deep understanding of the mathematical ideas and concepts taught in the classroom is vital as a nursery or primary school teacher. In order for children to get to grips with these concepts, trainee teachers need to be aware of how they come to interpret and understand them. Now in its 5th edition, this essential book helps trainee teachers develop their own knowledge of key mathematical ideas and concepts for the nursery and primary classroom. Now focusing specifically on ages 3-7, it also supports trainees with several age appropriate classroom activities. As well as updates to further reading suggestions and research, this revised edition includes new content on Mastery in learning mathematics, Simple fractions, Roman numerals, Money as a form of measurement. *African Indigenous Knowledge and the Sciences* Gloria Emeagwali,Edward Shizha,2016-07-08 This book is an intellectual journey into epistemology, pedagogy, physics, architecture, medicine and metallurgy. The focus is on various dimensions of African Indigenous Knowledge (AIK) with an emphasis on the sciences, an area that has been neglected in AIK discourse. The authors provide diverse views and perspectives on African indigenous scientific and technological knowledge that can benefit a wide spectrum of academics, scholars, students, development agents and policy makers in both governmental and non-governmental organizations and enable critical and alternative analyses and possibilities for understanding science and technology in an African historical and contemporary context.

Early Childhood Teachers' Professional Competence in Mathematics Simone Dunekacke,Aljoscha Jegodtka,Thomas Koinzer,Katja Eilerts,Lars Jenßen,2021-09-30 This edited volume presents cutting edge research on the professional competence of early childhood mathematics teachers. It considers professional knowledge, motivational, affective dispositions, skills and performance in early childhood mathematics and outlines future fields of research in this area. The book argues that it is essential for early childhood teachers to prepare a high quality learning environment and that mathematical competence is highly relevant for children's individual development. Bringing together research from mathematics education, educational science and psychology, it integrates international perspectives and considers the contextual factors that affect the development of children's mathematical competence within Early Childhood Education and Care (ECEC) settings. The book uses a model to describe professional teacher competence that considers the dispositions of early childhood teachers, situation specific skills of early childhood teachers and the performance of early

childhood teachers The book is the first of its kind to give a comprehensive overview and allows for integrative perspectives and interdisciplinary understanding regarding pre and in service ECEC teachers professional competence in the domain of mathematics It will be essential reading for academics researchers and students of early childhood education mathematics education and teacher education Chapters 5 6 and 13 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license
