Hands-On Generative Adversarial Networks with PyTorch 1.x John Hany, Greg Walters, 2019-12-12 Apply deep learning techniques and neural network methodologies to build, train, and optimize generative network models. Key Features: Implement GAN architectures to generate images, text, audio, 3D models, and more. Understand how GANs work and become an active contributor in the open source community. Learn how to generate photo-realistic images based on text descriptions. Book Description: With continuously evolving research and development, Generative Adversarial Networks (GANs) are the next big thing in the field of deep learning. This book highlights the key improvements in GANs over generative models and guides in making the best out of GANs with the help of hands-on examples. This book starts by taking you through the core concepts necessary to understand how each component of a GAN model works. You'll build your first GAN model to understand how generator and discriminator networks function. As you advance, you'll delve into a range of examples and datasets to build a variety of GAN networks using PyTorch functionalities and services, and become well versed with architectures, training strategies, and evaluation methods for image generation, translation, and restoration. You'll even learn how to apply GAN models to solve problems in areas such as computer vision, multimedia, 3D models, and natural language processing (NLP). The book covers how to overcome the challenges faced while building generative models from scratch. Finally, you'll also discover how to train your GAN models to generate adversarial examples to attack other CNN and GAN models. By the end of this book, you will have learned how to build, train, and optimize next-generation GAN models and use them to solve a variety of real-world problems. What you will learn: Implement PyTorch's latest features to ensure efficient model designing. Get to grips with the working mechanisms of GAN models. Perform style transfer between unpaired image collections with CycleGAN. Build and train 3D GANs to generate a point cloud of 3D objects. Create a range of GAN models to perform various image synthesis operations. Use SEGAN to suppress noise and improve the quality of speech audio. Who this book is for: This GAN book is for machine learning practitioners and deep learning researchers looking to get hands-on guidance in implementing GAN models using PyTorch. You'll become familiar with state-of-the-art GAN architectures with the help of real-world examples. Working knowledge of Python programming language is necessary to grasp the concepts covered in this book.

Deep Learning for Numerical Applications with SAS Henry Bequet, 2018-07-20 Foreword by Oliver Schabenberger, PhD, Executive Vice President, Chief Operating Officer, and Chief Technology Officer, SAS. Dive into deep learning. Machine learning and deep learning are ubiquitous in our homes and workplaces, from machine translation to image recognition and predictive analytics to autonomous driving. Deep learning holds the promise of improving many everyday tasks in a variety of disciplines. Much deep learning literature explains the mechanics of deep learning with the goal of implementing cognitive applications fueled by Big Data. This book is different. Written by an expert in high performance analytics, Deep Learning for Numerical Applications with SAS introduces a new field, Deep Learning for Numerical Applications (DL4NA). Contrary to deep learning, the primary

goal of DL4NA is not to learn from data but to dramatically improve the performance of numerical applications by training deep neural networks Deep Learning for Numerical Applications with SAS presents deep learning concepts in SAS along with step by step techniques that allow you to easily reproduce the examples on your high performance analytics systems It also discusses the latest hardware innovations that can power your SAS programs from many core CPUs to GPUs to FPGAs to ASICs This book assumes the reader has no prior knowledge of high performance computing machine learning or deep learning It is intended for SAS developers who want to develop and run the fastest analytics In addition to discovering the latest trends in hybrid architectures with GPUs and FPGAs readers will learn how to Use deep learning in SAS Speed up their analytics using deep learning Easily write highly parallel programs using the many task computing paradigms This book is part of the SAS Press program *Getting Started with Amazon SageMaker Studio* Michael Hsieh,2022-03-31 Build production grade machine learning models with Amazon SageMaker Studio the first integrated development environment in the cloud using real life machine learning examples and code Key FeaturesUnderstand the ML lifecycle in the cloud and its development on Amazon SageMaker StudioLearn to apply SageMaker features in SageMaker Studio for ML use casesScale and operationalize the ML lifecycle effectively using SageMaker StudioBook Description Amazon SageMaker Studio is the first integrated development environment IDE for machine learning ML and is designed to integrate ML workflows data preparation feature engineering statistical bias detection automated machine learning AutoML training hosting ML explainability monitoring and MLOps in one environment In this book you ll start by exploring the features available in Amazon SageMaker Studio to analyze data develop ML models and productionize models to meet your goals As you progress you will learn how these features work together to address common challenges when building ML models in production After that you ll understand how to effectively scale and operationalize the ML life cycle using SageMaker Studio By the end of this book you ll have learned ML best practices regarding Amazon SageMaker Studio as well as being able to improve productivity in the ML development life cycle and build and deploy models easily for your ML use cases What you will learnExplore the ML development life cycle in the cloudUnderstand SageMaker Studio features and the user interfaceBuild a dataset with clicks and host a feature store for MLTrain ML models with ease and scaleCreate ML models and solutions with little codeHost ML models in the cloud with optimal cloud resourcesEnsure optimal model performance with model monitoringApply governance and operational excellence to ML projectsWho this book is for This book is for data scientists and machine learning engineers who are looking to become well versed with Amazon SageMaker Studio and gain hands on machine learning experience to handle every step in the ML lifecycle including building data as well as training and hosting models Although basic knowledge of machine learning and data science is necessary no previous knowledge of SageMaker Studio and cloud experience is required *Advancing the use of Eye-Tracking and Pupillometric Data in Complex Environments*.
