and experiment the book employs a succession of steps First the classical properties of light are summarised and then models for the quantum properties of light are introduced Next the basic components of the experiments are introduced and their specific properties that have an influence on quantum optics experiments are discussed A chapter on basic experiments forms the building blocks of all quantum optics experiments The last part of the book deals with currently reported experiments in non classical light and squeezing and with quantum non demolition experiments and finishes off with a chapter on applications in communications cryptography and gravity wave detectors   The APDAlog ,1990   **Eldercare, a Practical Guide to Clinical Geriatrics** Mary O'Hara-Devereaux,Len Hughes Andrus,Cynthia D.
