Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models Jorge Garza Ulloa, 2021-11-30

Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models focuses on the relationship between three different multidisciplinary branches of engineering Biomedical Engineering Cognitive Science and Computer Science through Artificial Intelligence models. These models will be used to study how the nervous system and musculoskeletal system obey movement orders from the brain as well as the mental processes of the information during cognition when injuries and neurologic diseases are present in the human body. The interaction between these three areas are studied in this book with the objective of obtaining AI models on injuries and neurologic diseases of the human body studying diseases of the brain spine and the nerves that connect them with the musculoskeletal system. There are more than 600 diseases of the nervous system including brain tumors epilepsy Parkinson's disease stroke and many others. These diseases affect the human cognitive system that sends orders from the central nervous system CNS through the peripheral nervous systems PNS to do tasks using the musculoskeletal system. These actions can be detected by many Bioinstruments Biomedical Instruments and cognitive device data allowing us to apply AI using Machine Learning Deep Learning Cognitive Computing models through algorithms to analyze detect classify and forecast the process of various illnesses diseases and injuries of the human body.

This report was prepared to assist managers in the risk-managed application of expert systems (ES) technology. Two problems that have frustrated managers and technicians who might otherwise be interested in exploring ES solutions are the seeming lack of a software engineering discipline for creating and maintaining expert systems and the fact that the software development risks

associated with expert systems have not been clearly addressed This guide focuses on ES development as a software engineering endeavor and emphasizes that as such it should be subject to much the same discipline as conventional automated information system software The guide is meant to be used in conjunction with accepted software development methods and standards such as Department of Defense DOD Standards 2167A and 7935 1 DOD Directive 7920 1 DOD Instruction 7920 2 and the OSD Major Automated System Review Council MAISRC Guidelines for Program Managers This document presents a step by step guideline that addresses the managerial and technical risks of each phase in the software development life cycle of systems that contain ES components     **Artificial Intelligence and Instruction** Greg Kearsley,1987 It documents the attempts of various researchers who share the desire to move ICAI programs into the real world of education and training It contains a collection of articles that describe various aspects of developing ICAI programs
