The 7Cs of Coaching Bruce Grimley, 2019-07-23 In *The 7Cs of Coaching* Bruce Grimley expertly explains neuro linguistic programming NLP to the advanced coach and counsellor by asking a simple question: What is NLP? Inviting us on his personal journey, he provides the reader in this book with an insight as to how he coaches using his own NLP model as well as exploring the complexity of NLP as a practice and why it tends to polarise opinion in today's coaching landscape. Grimley insists that if the NLP paradigm is to find credible traction in the modern world, it needs to test its claims in the same way as other academic disciplines. Based on his own research, this book does just that. Incorporating contemporary psychological understanding and neuroscientific research throughout, it provides a complete NLP model outlining specific steps for the reader to follow in order to achieve excellence in coaching. It includes case studies, exercises and reflective questions which will encourage both novice and advanced coaches to explore the benefits of NLP understanding and taking into account emotions and the unconscious mind in their practice. By analysing the NLP landscape, this book also addresses many issues which are shared by the broader coaching community, such as differentiation from counselling, professional status and lack of a reliable empirical evidence base. Ground breaking and thought provoking, this book offers a modern examination of NLP. Highlighting why NLP is still useful and popular and exploring why it fills a gap in the market place for effective coaching, this book will be essential reading for all coaches in practice and training, coach supervisors and counsellors with an interest in coaching techniques.

The NLP Cookbook Fran Burgess, 2011-11-16 The NLP Cookbook is a veritable smorgasbord of NLP and related techniques gleaned from some of the greatest names in the field and adapted to provide an encyclopaedic resource for all therapists, coaches, change agents or health professionals. Fran Burgess uses the metaphor of cooking to describe the process of bringing together the best ingredients in NLP and selecting them carefully in order to produce some mouth watering results. The recipes are grouped into sections depending on their purpose. Quite a few focus on how to shift state with some of these targeting specific states like acceptance and anxiety. These are

followed by recipes that seek to develop behaviours and skills and others that address beliefs and identity There is then a wide range to choose from which deal with goals relationships and the process of change The beauty is that most of them can be used time and again for different circumstances and contexts so they never wear out Each recipe is prefaced by an introduction giving you some background to its source and evolution You are provided with its ingredients should you be interested in its engineering plus timings and materials required and if it is suitable for working solo or with a partner Novice cooks can follow the recipes slavishly whereas those with more experience can adapt a recipe adding a little something here removing a little something there This is not magic They understand the chemistry that underpins the cooking process They know what happens when you put this with that now or later Modeling with NLP Robert Dilts,1998 This text covers the NLP modelling process and its applications The results define the key communication and relational skills employed by effective leaders to achieve practical results in their working reality in order to create a world to which people want to belong **Modeling with NLP** Robert Brian Dilts,2017-10-15 Modeling is the process of taking a complex event or phenomenon and breaking it into small enough chunks so that it can be recapitulated or applied in some way Behavioral modeling involves observing and mapping the successful processes which underlie an exceptional performance of some type The purpose of behavior modeling is to create a pragmatic map or model of a particular behavior which can be used to reproduce or simulate some aspect of that performance by anyone who is motivated to do so The ability to model effectively opens the door to many possibilities that have previously been unavailable to humankind In addition to providing a methodology which can be used to make ideas more explicit and easier to communicate modeling can transform the way we view and perceive one another If we see someone who does something better than ourselves for example instead of looking at that person and feeling inadequate jealous or suspicious we can go out and model how they do what they do The field of Neuro Linguistic Programming NLP has developed out of the modeling of the behaviors and thinking processes of exceptional people from many fields In fact the worldwide success of NLP as a technology for creating and managing change comes from its foundation in the modeling process This book is about the NLP modeling process and its applications The first part of this book is devoted to defining the principles and tools necessary for effective modeling the epistemology methodology and technology of NLP The second part of the book illustrates the application of NLP modeling procedures to the study of effective leadership It provides examples of how NLP was applied to identify specific cognitive linguistic and behavioral skills used by leaders to address challenging situations involving problem solving delegation and training on the job The results define the key communication and relational skills employed by effective leaders to achieve practical results in their working reality in order to create a world to which people want to belong *Business NLP For Dummies* Lynne Cooper,2010-11-05 Achieve business success with Neuro linguistic Programming People around the globe use NLP to improve their communication skills build rapport make positive changes and accomplish their goals When used in a business
