Rajender R. Aparasu, John P. Bentley, 2014-03-07 *Principles of Research Design and Drug Literature Evaluation* is a unique resource that provides a balanced approach covering critical elements of clinical research, biostatistical principles and scientific literature evaluation techniques for evidence based medicine. FEATURES Chapter Pedagogy, Learning Objectives, Review Questions, References and Online Resources, Instructor Resources, PowerPoint Presentations, Test Bank and an Answer Key, Student Resources, a Navigate Companion Website including Crossword Puzzles, Interactive Flash Cards, Interactive Glossary Matching Questions and Web Links. From the Foreword: This book was designed to provide and encourage practitioner's development and use of critical drug information evaluation skills through a deeper understanding of the foundational principles of study design and statistical methods. Because guidance on how a study's limited findings should not be used is rare, practitioners must understand and evaluate for themselves the veracity and implications of the inherently limited primary literature findings they use as sources of drug information to make evidence based decisions together with their patients. The editors organized the book into three supporting sections to meet their pedagogical goals and address practitioners' needs in translating research into practice. Thanks to the editors, authors and content of this book, you can now be more prepared than ever before for translating research into practice. L. Douglas Ried, PhD, FAPhA, Editor in Chief, Emeritus, Journal of the American Pharmacists Association, Professor and Associate Dean for Academic Affairs, College of Pharmacy, University of Texas at Tyler, Tyler, Texas.
