Parr, 2018-04-17 A new edition of the trusted book on intellectual property, Intellectual Property, simplifies the process of attaching a dollar amount to intellectual property and intangible assets be it for licensing, mergers and acquisitions, loan collateral, investment purposes and determining infringement damages. Written by Russell L. Parr, an expert in the valuation intellectual property field, this book comprehensively addresses IP Valuation, the Exploitation Strategies of Licensing and Joint Ventures, and determination of Infringement Damages. The author explains commonly used strategies for determining the value of intellectual property as well as methods used to set royalty rates based on investment rates of returns. This book examines the business economics of strategies involving intellectual property licensing and joint ventures, provides analytical models that can be used to determine reasonable royalty rates for licensing and for determining fair equity splits in joint venture arrangements. Key concepts in this book are brought to life by presenting real world examples of exploitation strategies being used by major corporations. Provides practical tools for and examines the business economics for

determining the value intellectual property in licensing and joint venture decisions Presents analytical models for determining reasonable royalty rates for licensing and for determining fair equity splits in joint venture arrangements Provides a detailed discussion about determining intellectual property infringement damages focusing on lost profits and reasonable royalties A Survey on Today's Smartphone Usage Tobias Himmelsbach, 2012-05-26 Diploma Thesis from the year 2011 in the subject Computer Science Miscellaneous grade 2 3 Technical University of Berlin Agententechnologien in betrieblichen Anwendungen language English abstract The smartphone market is evolving rapidly irrespective of the well known spread within the business sector In recent years the average users tend to replace their traditional mobile phones PDAs and Palms with smartphones These devices have become a pervasive part of everyday life Dealing with huge amounts of data the mobile device s and application s demand for certain security standards cannot be underestimated In recent studies the individual user s needs in terms of technical features applications etc have not been addressed and analyzed properly To capture the problem in its full extent it is vital to understand the user s expectations Besides the usage patterns have to be described especially against the background of security aspects As mentioned before recent analyzes did not specifically ask what the user expects from a smartphone Hence the main objective of this work is to get a broad picture on how smartphones are used today and what users expect taking into consideration security aspects An international web based online survey was designed and performed to measure and analyze users behaviour when using smartphones with the aim of finding out what they want and expect from a smartphone The main goals were to identify user needs in the context of smartphones to analyze their knowledge and acquisition to security aspects and to get significant data about the user s behaviour The main findings of the survey are that on the one hand most of the users want a smartphone to provide classic mobile phone features such as performing phone calls writing messages or storing contacts On the other hand they want a smartphone to provide mobile internet access navigation features multimedia aspects a comfortable usability and a good lo

## **Differences Between the Security Models of Android and iOS**

Samuel Hopstock, 2019-07-24 Seminar paper from the year 2018 in the subject Computer Science IT Security grade 1 0 Technical University of Munich course Seminar Mobile Application Security language English abstract Smartphones are being used as the preferred device for as many things as possible in today's world. This is why having secure phones that are resilient against attacks targeting their users data becomes more and more important. This paper tries to assess what measures device vendors have taken to ensure those attacks will not be successful. Because the market is mostly divided between Google's Android and Apple's iOS we put our focus on those two operating systems and compare their respective security models. Additionally this comparison will be evaluating how those models have changed over time since the beginning of the smartphone era around 2010. The last part of this analysis will take a look at a different view on smartphones the perspective of so called power users. Those are people that do not only use their smartphone for downloading some apps and surfing the Internet but rather want to do some lower level customization to the operating system by rooting their Android device or jailbreaking their iPhone. This process of gaining full privileges on the phone not only creates advantages for the user but can also have rather negative implications on the device's security. How exactly does this affect the protections implemented by the vendor
