Dougherty, 1923 **Practice and Automatization in Second Language Research** Yuichi Suzuki, 2023-08-28 Practice is a recurring and popular theme in language education. However, the concepts of practice and automatization have recently received renewed theoretical and practical interest and are increasingly being explored from the skill acquisition theory and cognitive psychology perspectives. In this volume, leading scholars discuss the optimal types, amounts, and schedules of practice for specific language structures and skills, as well as for various types of learners and learning contexts to facilitate second language development. They illuminate how practice is instantiated for specific groups of teachers and learners in diverse institutionalized contexts such as foreign language curriculum development, intelligent computer-assisted language learning systems, task-based language teaching, and study abroad. Furthermore, original methodological syntheses of extant research on practice and automatization are presented along with guides for conducting empirical research on these topics. Practice and Automatization in Second Language Research: Perspectives from Skill Acquisition Theory and Cognitive Psychology is a valuable resource and reference for graduate students and researchers in the field of SLA and applied linguistics.

Early Literacy Fundamentals Sue Palmer, Ros Bayley, 2005 Early Literacy Fundamentals offers powerful activities to develop the skills, concepts, and knowledge underpinning early literacy. It builds on the personal, social, emotional, creative, and physical development skills that are a traditional part of early childhood programs. Based on the latest research, the book recognizes that oral language is the bedrock upon which formal learning is based and that literacy begins at birth and is part of an ongoing developmental process. Development concurrently with oral language development is enhanced by adult models who expose children to print, and how it works is based on a systematic relationship between letters and sounds, rooted in and connected to the child's culture and communication patterns. Each of the activities is organized around a seven-strand framework that reflects successful early childhood practices, is presented along with background research, and practical advice on helping children initiate their own constructive play. The types of activities teachers will find include learning activities appropriate to a young child's age and stage of development, quality pre-school activities that boost all children's language and literacy skills, and build a strong foundation for reading and literacy success in school opportunities.
