Tsunami Chronicles Adventures In Disaster Management:

Tsunami Chronicles Bill Nicol, 2013-06-13 Few natural disasters come bigger than the 2004 tsunami. It left a trail of destruction from one side of the Indian Ocean to the other. Hardest hit was Aceh in Indonesia's west where the tsunami killed almost a quarter of a million people and left half a million homeless as it smashed into a strip of coastline 800 kilometres long and several kilometres wide. The global community rallied to help in the largest military deployment since World War II. It then spent billions rebuilding Aceh in one of the most challenging reconstruction programs of its kind. *Tsunami Chronicles: Adventures in Disaster Management* tells the inside story of recovery. Written by the Indonesian Government's senior advisor for tsunami recovery, Bill Nicol, it lays bare the tectonic political and managerial forces that swept along the rebuilding program with no less force than the tsunami itself. This is a powerful first-hand narrative from a highly experienced journalist, author, and consultant who played a pivotal role in the recovery operations. A series of six books in one book, *Tsunami Chronicles* offers rare and unique insights that will annoy some, anger a few, excite others, and inspire many. It will appeal to anyone with an interest in international development and disaster recovery: humanitarian volunteers, aid workers, consultants, engineers, agency staff, institutional managers, policy makers, and political leaders, as well as academics, students of management, business leaders, and the general public.

Disasters in World History Benjamin Reilly, 2024-08-27 *Disasters in World History* surveys the development of disaster studies as a discipline, as well as presenting historical case studies and theories used by historians to understand disasters. Disasters here defined as the complex interaction between natural hazards and specific human vulnerabilities have frequently left a mark on human history. Cataclysms have toppled dynasties, fueled massacres, and shaped the culture of societies frequently affected by natural hazards. This volume fosters understanding of such events by considering both social science theory and the natural science concepts relevant to disaster studies. In addition, the text makes heavy use of an emerging psychological theory relevant to disaster studies: the behavioral immune system, which helps to explain why xenophobic behavior and even violence often erupt in the aftermath of disasters. Chapters consider specific examples of disasters: earthquakes, tsunamis, volcanic eruptions, climate change (including modern anthropogenic climate change or global warming), and tropical cyclones. This book is an accessible resource ideal for undergraduates and instructors in world history, environmental history, and disaster studies courses.

Learning from Arnstein's Ladder Mickey Lauria, Carissa Schively Slotterback, 2020-10-12 Sherry Arnstein, writing in 1969 about citizen involvement in planning processes in the United States, described a ladder of citizen participation that showed participation ranging from low to high. Arnstein depicted the failings of typical participation processes at the time and characterized aspirations toward engagement that have now been elevated to core values in planning practice. But since that time, the political, economic, and social context has evolved greatly, and planners, organizers, and residents have been involved in planning and community development practice in ways previously unforeseen. *Learning from Arnstein's Ladder* draws on

Are Natural Disasters Increasing? Roman Espejo,2014-04-14

Contemporary movies and television programs often depict the world as we know it displaced awash in ocean tides or broken into pieces by devastating earthquakes The climate data coming through news outlets can seem to reinforce this fatalistic view with earth warming records hitting new levels year after year While it can seem like natural disasters are increasingly affecting our world is there data to support this perception or is this view of events mediated by panicked activists and the media This anthology explores key ideas and opinions regarding discussions about natural disasters including subjects such as the frequency and severity of natural disasters poor infrastructure human activity and the economic costs of natural disasters
