Introduction to Transportation Security Frances L. Edwards, Daniel C. Goodrich, 2012-09-26 Transportation is the lifeline of any nation connecting people supporting the economy and facilitating the delivery of vital goods and services The 9 11 attacks and other attacks on surface transportation assets including the

bombings in Madrid London Moscow and Mumbai demonstrate the vulnerability of the open systems to disruption and the consequences of the attacks on people property and the economy Now more than ever it has become imperative for businesses operating in the transportation and transit sectors to develop comprehensive security programs accounting for both natural and man made hazards and safeguarding people places and equipment while at the same time ensuring operations continuity Providing transportation managers with the knowledge skills and abilities to effectively manage the security of transportation assets Introduction to Transportation Security examines Basic theories of security and emergency management The integrated nature of the nation s critical infrastructure and the threats to transportation in each surface mode Federal agencies working in emergency management and transportation security and their intelligence and response requirements and capabilities The types of disasters that have occurred in the U S and selected nations and their significant economic impacts Cost beneficial security strategies aimed at preventing catastrophic failures in each transportation mode Effective methods for organizing testing and evaluating transportation security across modes and professions The book covers all transportation modes and their interconnectivity including highway air cargo freight and passenger rail transit and maritime It presents learning objectives and discussion questions to test assimilation of the material and case studies to facilitate a practical understanding of the concepts Introduction to Transportation Security provides essential information for students in transportation management programs and professionals charged with safeguarding the movement of assets within our interconnected transportation network

Transportation Security Clifford Bragdon,2011-08-19 Insecure transportation systems are costing our worldwide mobility based economy as much as 6% of GDP annually The effectiveness of security measures vary widely In the United States depending on the mode of transportation it ranges from medium effectiveness for airports to low effectiveness for maritime rail transit and intermodal activities Situational awareness and interoperability are lacking as we try to deal with both natural and man made disasters Regardless of the transport mode improvements are essential if governments and corporations are to address security planning response and national preparedness Transportation Security examines this problem in a comprehensive manner and addresses security based technologies and solutions to minimize risk Covers air sea roadway rail and public transport modes Offers technological solutions for mobility based problems in planning logistics and policy to improve security combat terrorism and ensure national preparedness Includes work of international experts global examples related to transportation security

Building a Secure Nation United States. Transportation Security Administration,2004 Our mission is to protect the nation's transportation system a complex system of systems comprised of aircraft ships and rail and motor vehicles airports seaports and transshipment facilities roads railways bridges and pipelines and supporting infrastructures from terrorist attack and criminal activity We have made it our responsibility to understand the magnitude of such pursuit and maintain a heightened sense of urgency in all of our security operations Americans depend on us and will continue to do so into the future As we work to meet the immediate needs of the transportation sector we continue to develop and implement the strategies that enable us to perform our daily activities while ultimately preparing us for the future Accordingly we have prepared a five year strategic plan focused on four fundamental goals 1 Domain Awareness 2 Prevent and Protect 3 Respond and Restore and 4 Organizational Effectiveness Intelligent Transportation Systems (ITS) ,1997

industry Improving Surface Transportation Security National Research Council, Division on Engineering and Physical Sciences, Transportation Research Board, Computer Science and Telecommunications Board, National Materials Advisory Board, Commission on Physical Sciences, Mathematics, and Applications, Commission on Engineering and Technical Systems, Committee on R&D Strategies to Improve Surface Transportation Security, 1999-10-12 The surface transportation system is vital to our nation's economy, defense, and quality of life. Because threats against the system have hitherto been perceived as minor, little attention has been paid to its security. But the world is changing as highlighted by dramatic incidents such as the terrorist chemical attack on the Tokyo subway in 1995. As a consequence, security concerns are now attracting more attention appropriately so for the threat is real and responding to it is hard. Although the surface transportation system is remarkably resilient, it is also open and decentralized, making a security response challenging. Research and development can contribute to that response in important ways. Some important themes emerge from analysis of this strategy. First, a dual use approach in which security objectives are furthered at the same time as other transportation goals can encourage the implementation of security technologies and processes. Second, modeling could be used more to develop a better understanding of the scope of the security problem. Third, DOT can play an important role in developing and disseminating information about best practices that use existing technologies and processes, including low technology alternatives. Finally, security should be considered as part of a broader picture, not a wholly new and different problem, but one that is similar and closely connected to the transportation community's previous experience in responding to accidents, natural disasters, and hazardous materials.

Securing Public Transportation Systems Florian Brauner, 2016-08-08 Florian Brauner addresses the risk reduction effects of security measures SecMe as well as economic and social effects using terrorist threats in public transportation as use case. SecMe increases the level of security but causes interferences and restrictions for customers, e.g., privacy. This study identifies the interferences and analyzes the acceptance with an empirical survey of customers. A composite indicator for the acceptance of different SecMe is developed and integrated into a risk management framework for multi-criteria decision analysis, achieving the right balance of risk reduction costs and social acceptance.
