Ruqian Lu,Zhi Jin,2012-12-06 Many approaches have been proposed to enhance software productivity and reliability These approaches typically fall into three categories the engineering approach the formal approach and the knowledge based approach The optimal gain in software productivity cannot be obtained if one relies on only one of these approaches Thus the integration of different approaches has also become a major area of research No approach can be said to be perfect if it fails to satisfy the following two criteria Firstly a good approach should support the full life cycle of software development Secondly a good approach should support the development of large scale software for real use in many application domains Such an approach can be referred to as a five in one approach The authors of this book have for the past eight years conducted research in knowledge based software engineering of which the final goal is to develop a paradigm for software engineering which not only integrates the three approaches mentioned above but also fulfils the two criteria on which the five in one approach is based Domain Modeling Based Software Engineering A Formal Approach explores the results of this research Domain Modeling Based Software Engineering A Formal Approach will be useful to researchers of knowledge based software engineering students and instructors of computer science and software engineers who are working on large scale projects of software development and want to use knowledge based development methods in their work

Zinnes,2009-06-10 While much foreign aid achieves commendable goals some is ineffective In this volume Clifford Zinnes argues that a donor s intrinsic informational limitations on the local context as well as inability to control the progress of interventions mean that lack of success is not rooting in insufficient funding but in maladapted institution designs of interventions that don t foster local ownership He indentifies and assesses a newly emerging class of foreign aid delivery that promises to overcome these obstacles The approach is based on prospective inter jurisdictional competition PIJC Beneficiary groups often local level governments supported by their private sector and civil society act as teams and compete against

each other under explicit predefined rules and objectives to design and implement interventions under their own aegis to achieve the highest quantitatively measured performance either relative to others tournaments or against a preset benchmark certification Teams that cooperate internally are the likeliest to win the rewards which aside from the longer run benefits of the intervention itself might include more substantive financial or technical assistance from the sponsor Since only groups serious about reforming choose to play Zinnes says the incentives generated by the ensuing race to the top competition create local ownership encouraging recipients to draw on their own knowledge Moreover since all teams that compete and not just those who win donor rewards benefit from their own reform efforts he argues that this approach can leverage aid resources more than a conventional bilateral aid agreement Zinnes presents a dozen recent applications of the approach including those sponsored by the World Bank USAID the United Nations the Ford Foundation and others He also recommends improvements and ways to scale up PIJC based projects in applications ranging from protecting the environment and reducing red tape through to raising literacy and co opting warlords *Successful Project Management*
