**The Superpave Mix Design Manual for New Construction and Overlays** Ronald J. Cominsky, 1994 This laboratory manual presents Superpave mix design system in a complete step by step format. It is intended for engineers and technicians in public and private organizations to use when designing paving mixes for all classes of highways from farm to market roads to urban freeways. An essential companion to this manual is The Superpave Mix Design System Manual of Specifications Test Methods and Practices. The Superpave software program The Superpave Specification Mix Design and Support Program And its users manual are also necessary to take full advantage of the mix design system

**Structural Analysis of Aggregate Blends Using the SHRP Gyratory Compactor** Dan L. Seward,John A. Hinrichsen,Jennifer Ries,1996 The Iowa Department of Transportation IDOT received a Strategic Highway Research Program SHRP gyratory compactor in December 1994 Since then IDOT has been studying the ability of the compactor to analyze fundamental properties of aggregates such as shape texture and gradation by studying the

volumetrics of the aggregate blends under a standard load using the SHRP gyratory compactor This method of analyzing the volumetrics of aggregate blends is similar to SHRP's fine aggregate angularity procedure which analyzes void levels in noncompacted aggregate blends which in turn can be used to evaluate the texture or shape of aggregates what SHRP refers to as angularity Research is showing that by splitting the aggregate blend on the 2 36 mm 8 sieve and analyzing the volumetrics or angularity of the separated blend important fundamental properties can be determined Most important is structure the degree and location of aggregate interlock In addition analysis of the volumes of the coarse and fine portions can predict the voids in the mineral aggregate and the desired asphalt content By predicting these properties it can be determined whether the combined aggregate blend when mixed with asphalt cement will produce a mix with structural adequacy to carry the designed traffic load
