Surpassing Ourselves An Inquiry Into The Nature And Implications Of Expertise:

Surpassing Ourselves Carl Bereiter, Marlene Scardamalia, 1993 Expertise arouses fears of a society ruled by an elite of specialists in white coats or else it arouses derision because of the ineffectual bumbling of the so called experts In *Surpassing Ourselves* Bereiter and Scardamalia demonstrate that these stereotypes of expertise are false Drawing upon the latest research in cognitive psychology they show that expertise is something other than training experience knowledge or formal qualifications Many individuals acquire all these without ever becoming experts while some beginners even schoolchildren already approach problems in an expertlike fashion Expertise is a process of progressive problem solving in which people continuously rethink and redefine their tasks A future expert society will not be a heaven in which all problems have disappeared but a realistic utopia in which endless problem solving will be a highly valued part of life

Handbook on Business Process Management 2 Jan vom Brocke, Michael Rosemann, 2010-09-22 Business Process Management BPM has become one of the most widely used approaches for the design of modern organizational and information systems The conscious treatment of business processes as significant corporate assets has facilitated substantial improvements in organizational performance but is also used to ensure the conformance of corporate activities This Handbook presents in two volumes the contemporary body of knowledge as articulated by the world's leading BPM thought leaders This second volume focuses on the managerial and organizational challenges of Business Process Management such as strategic and cultural alignment governance and the education of BPM stakeholders As such this book provides concepts and methodologies for the integration of BPM Each chapter has been contributed by leading international experts Selected case studies complement their views and lead to a summary of BPM expertise that is unique in its coverage of the most critical success factors of BPM

#Thought Leadership Tweet Liz Alexander,Craig Badings,2012 Thought leaders advance the marketplace of ideas by proposing actionable commercially relevant research backed new points of view They engage in and showcase innovative thinking as opposed to churning out product focused brand centric white papers or curated content that mimics others ideas But while individual thought leaders are in plentiful supply at least those who self identify as such many organizations struggle to establish their thought leadership approach If you recognize the importance of differentiating yourself to clients by offering compelling points of view that are intriguing innovative inspiring and wholly relevant to them this book is for you Authors Dr Liz Alexander and Craig Badings who have more than 50 years of consulting experience between them have devised a series of questions that will provoke you to consider all the elements necessary to execute a successful organizational thought leadership campaign The authors have done the preliminary thinking for you so that your organization can better leverage your value in your industry This book takes a different approach to many who see thought leadership as part of a short term product marketing advertising or PR strategy It will ensure that you embed thought leadership across the entire organization and centralize it as part of your client centric culture Many organizations are squandering time money and effort on initiatives that do not move the needle in terms of establishing a differentiated brand identity deep trust and loyal followership Arm yourself with this small yet immensely powerful book and that will no longer be something you have to worry about THOUGHT LEADERSHIP tweet is part of the THiNKaha series whose slim easy to read and absorb books contain 140 thought provoking and actionable quotes tweets ahas *Expertise in Second Language Learning and Teaching* K. Professional Learning: Gaps and Transitions on the Way from Novice to Expert Henny P.A. Boshuizen,Rainer Bromme,Hans Gruber,2006-04-11 About the Book Series The idea for the Book Series Innovation and Change in Professional Education ICPE was born in 1996 While working on another publication in this area we noticed that professional educators faced similar problems without even knowing from each other It was this observation that resulted in examining the possibilities for a new publication platform about professional education with input from different professions We wanted to develop a publication source that would bring together educators and researchers to exchange ideas and knowledge about theory research and professional practice But we were not only striving for a book series informing readers about important themes in the professions A second goal was to focus on processes of change and innovation We were heavily involved in innovations going on in our institutions and were convinced that a better understanding was needed in a wide range of issues critically important to the future of professional education It was our belief that scholarly publications about innovation processes may support fundamental change in professional education ICPE reflects our view that professional education deserves such a publication platform It aims to approach critical questions of educational innovations and to examine dynamics of educational change in various professional domains in the context of innovation processes The books will include contributions from frontline practitioners leading researchers or distinguished scholars in professional education delivering reports of empirical or theoretical research reviews interpretations of evaluation studies or descriptions of innovative approaches

The Psychology of Magic and the Magic of Psychology Amir Raz,Jay A. Olson,Gustav Kuhn,2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals

that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception
