splash blended E15 fuel Exhaust emissions exhaust gas temperature torque power barometric pressure air temperature and
fuel flow were measured at five intervals using site blended E15 aging fuel and certification fuel E0 The durability test cycle
showed no noticeable impact on mechanical durability or engine power Emissions performance degraded beyond the
certification limit for this engine family mostly occurring by 28% of expected life Such degradation is inconsistent with prior
experience Comparisons showed that E15 resulted in lower CO and HC but increased NOX as expected for non feedback
controlled carbureted engines with increased oxygen in the fuel Fuel consumption also increased with E15 compared with E0
Throughout testing poor starting characteristics were exhibited on E15 fuel for hot re start and cold start Cranking time to
start and smooth idle was roughly doubled compared with typical E0 operation The carburetor was factory set for lean
operation to ensure emissions compliance Test protocols did not include carburetor adjustment to account for increased
oxygen in the E15 fuel
