Surveys On Solution Methods For Inverse Problems:

Surveys on Solution Methods for Inverse Problems David Colton, 2000-05-23 Inverse problems are concerned with determining causes for observed or desired effects Problems of this type appear in many application fields both in science and in engineering The mathematical modelling of inverse problems usually leads to ill posed problems i e problems where solutions need not exist need not be unique or may depend discontinuously on the data For this reason numerical methods for solving inverse problems are especially difficult special methods have to be developed which are known under the term regularization methods This volume contains twelve survey papers about solution methods for inverse and ill posed problems and about their application to specific types of inverse problems e g in scattering theory in tomography and medical applications in geophysics and in image processing The papers have been written by leading experts in the field and provide an up to date account of solution methods for inverse problems

The Boundary Element Method in Geophysical Survey Balgaisha Mukanova, Igor Modin, 2018-02-12 This volume is devoted to the application of the integral equations method IEM and boundary elements method BEM to problems involving the sounding of geological media using direct current DC Adaptive mesh generation algorithms and numerical methods for solving a system of integral equations are discussed Integral equations for the media which contains piecewise linear contact boundaries immersed local inclusions and subsurface relief are derived and solved numerically Both 2 5D and 3D models with ground surface relief are considered For 2D conductivity distributions the influence of the relief on the interpretation of results is shown Search solutions of the direct

problem with ground surface relief are compared using the appropriate interpretation of results based on different inversion programs
