Science Experiments Facebook Usa:

Advances in Experimental Political Science James N. Druckman, Donald P. Green, 2021-04-01 Experimental political science has changed. In two short decades it evolved from an emergent method to an accepted method to a primary method. The challenge now is to ensure that experimentalists design sound studies and implement them in ways that illuminate cause and effect. Ethical boundaries must also be respected. Results interpreted in a transparent manner and data and research materials must be shared to ensure others can build on what has been learned. This book explores the application of new designs, the introduction of novel data sources, measurement approaches and statistical methods, the use of experiments in more substantive domains and discipline wide discussions about the robustness, generalizability and ethics of experiments in political science. By exploring these novel opportunities while also highlighting the concomitant challenges this volume enables scholars and practitioners to conduct high quality experiments that will make key contributions to knowledge.

Teaching Climate Change in the United States Joseph Henderson, Andrea Drewes, 2020-03-23 This book highlights best practices in climate change education through the analysis of a rich collection of case studies that showcase educational programs across the United States. Framed against the political backdrop of a country in which climate change denial presents a significant threat to global action for mitigation and adaptation each case study examines the various strategies employed by those working in this increasingly challenging sociopolitical environment. Via co authored chapters written by educational researchers and climate change education practitioners in conversation with one another a wide range of education programs is represented. These range from traditional institutions such as K-12 schools and universities to the contemporary learning environments of museums and environmental education centres. The role of mass media and community level educational initiatives is also examined. The authors cover a multitude of topics including the challenge of multi stakeholder projects, tensions between indigenous knowledge and scientific research, education for youth activism and professional learning. By telling stories of success and failure from the field this book provides climate change researchers and educators with tools to help them navigate increasingly rough and rising waters.

Body, Capital and Screens Christian Bonah, Anja Laukötter, 2025-10-01 *Body, Capital and Screens* Visual Media and the Healthy Self in the 20th Century brings together new research from leading scholars from Europe and North America working at the intersection of film and media studies and social and cultural history of the body. The volume focuses on visual media in the twentieth century in Europe and the U.S. that informed and educated people about life and health as well as practices improving them. Through a series of in depth case studies the contributors to this volume investigate the relationships between film, television, private and public actors of the health sector and economic developments. The book explores the performative and interactive power of these visual media on individual health understandings, perceptions and practices. *Body, Capital and Screens* aims to better understand how bodily health has evolved as a form of capital throughout the century.
