Stern,2010-06-24 The services sector is key to economic growth competitiveness and poverty alleviation

Comprising more than two thirds of the world economy services are now commonly traded across borders helped by technological progress and the increased mobility of persons In recent years a number of developing countries have looked at trade in services as a means to both respond to domestic supply shortages and to diversify and boost exports Any country can tap into the trade potential of services but not every country can become a services hub across sectors The opening of the

services sector potentially comes with large benefits but also fears and costs that should not be overlooked. This book provides useful guidelines for the assessment of a country's trade potential and a roadmap for successful opening and export promotion in select services sectors. It looks at both the effects of increased imports and exports and provides concrete examples of developing country approaches that have either succeeded or failed to maximize the benefits and minimize the risks of opening. It focuses on sectors that have been rarely analyzed through the trade lens and/or have a fast growing trade potential for developing countries. These sectors are accounting, construction, distribution, engineering, environmental, health, information technology and legal services. This book is designed for non-trade specialists to understand how trade can help improve access to key services in developing countries and for trade specialists to understand the specific characteristics of each individual sector. It will be a useful tool for governments to design successful trade opening or promotion strategies and for the private sector and consumers to advocate sound domestic policy reforms accompanying an offensive trade agenda.

[Islamic Accounting And Finance: A Handbook](#) Khaled Hussainey, Hidaya Al Lawati, 2023-03-23. Islamic finance is one of the fastest growing sectors in international banking and finance. Owing to the increasing availability and ease of access to Islamic services, Islamic finance has become increasingly important not only in Muslim countries but around the world, making it a global industry. Under the Gulf Cooperation Council (GCC) as well as in some regions such as the Middle East and North Africa, a dual financial system is implemented where Sharia compliant products are marketed alongside conventional financial systems. In this thoroughly researched collection of chapters, researchers from around the world examine the role of Islamic finance in the economies and prospects of different countries. They discuss Islamic finance literature from both theoretical and empirical perspectives. The theoretical section of the book consists of conceptual chapters that enable readers to critically evaluate and expand their understanding of accounting and finance. The chapters in the empirical section of this handbook discuss and interpret empirical evidence to provide clear implications for practice, research and society. This section bridges the gap between theory and practice and offers suggestions for future research. Islamic Accounting and Finance is geared towards scholars and students but it is also of use to banking and finance practitioners.
