**Sustainability, Circular Economy, and Transformation in Organizations** Özşahin, Mehtap, Simovic, Vladimir, Ertürk, Alper, 2025-04-04 Sustainability and the circular economy are reshaping how businesses address global environmental and social challenges. Sustainability promotes practices that minimize ecological harm while ensuring long term economic and social well being. The circular economy focuses on resource efficiency, waste reduction and material reuse, driving organizations to innovate their business models and supply chains. By adopting these transformative approaches, businesses can reduce their environmental footprint, foster innovation and create lasting value for both society and the marketplace. Sustainability, Circular Economy and Transformation in Organizations explores the integration of sustainable practices and circular economics in organizational development. It examines solutions to transform businesses dealing with environmental and social challenges. This book covers topics such as environmental science, organizational development, and artificial intelligence, and is a useful resource for business owners, environmental scientists, economists, academicians, and researchers.

**Electroconvulsive therapy: from mechanisms to clinical practice** Mariana Pinto da Costa, Joao Luciano De Quevedo, Mario F. Juruena, Laith Alexander, Cristiana Tapoi, 2025-12-10 Electroconvulsive therapy (ECT) remains the most effective short term treatment for severe or treatment resistant depressive episodes. It is also effective in treatment refractory mania, schizophrenia, suicidal behavior, and catatonia. ECT maintains its position as an important treatment in modern psychiatry, and no other treatment from pharmacological agents to newer neurostimulation methods have surpassed its efficacy. In certain cases, ECT should be offered as a first line intervention. Despite this, ECT is often neglected as a treatment option, and this is reflected in the lack of research concerning ECT and the parameters needed to optimize treatment response and minimize side effects. A lack of access to treatment services, a history of stigma and controversy, and concerns about side effects all contribute. Furthermore, the clinical uncertainty is compounded by a lack of understanding regarding the fundamental physiological and molecular mechanisms that could explain how ECT works. Our objectives are to highlight and understand the relevance of ECT use in modern psychiatry and the perspectives on its use, and to explore the latest findings regarding the underlying neurobiological mechanisms of ECT. We also aim to draw attention to the challenges associated with the use of ECT in clinical practice and to the optimum ways to improve clinical outcomes or limit the short and long term side effects of the procedure. We encourage the submission of manuscripts, including original research, systematic reviews, meta analyses, case reports, letters to the editor regarding the use of ECT in psychiatric practice. For this research topic, the following subjects regarding the mechanisms and clinical use of ECT will be considered: Neurobiological mechanisms of ECT, e.g. immunomodulation, neuroplasticity, neural connectivity, modulation HPA axis, Neuroimaging alterations following ECT use, Efficacy of ECT in the treatment of psychiatric disorders, Modified ECT use, e.g. brief and ultrabrief pulse ECT, Individualized treatment parameters in ECT, Impact of various stimulus parameters, e.g. electrical pulse

shape amplitude width and pulse train directionality frequency polarity duration on the therapeutic response in ECT ECT use in special populations e g comorbid medical problems pregnancy geriatric population children and adolescents Measurement of ECT side effects and techniques to reduce ECT side effects Attitudes of mental health providers patients caregivers and general population about modern ECT Topic Editor Dr Joao Quevedo receives clinical research support from LivaNova and holds shares in Instituto de Neurociencias Dr Joao Quevedo Topic Editor Dr Mario F Juruena receives funding from the NIHR Biomedical Research Centre BRC at the South London and Maudsley SLaM NHS Foundation Trust and King s College London All other Topic Editors declare no competing interests with regards to the Research Topic subject

### **Advances in the Management of Lung Cancer: From the Bench to the Bedside and Back**

Vincenzo Pio Di Noia ,Alessandro Leonetti,Francesca Fusco,2025-08-29 Lung cancer remains one of the most hard to treat malignancies globally representing a significant burden on healthcare systems It is the leading cause of cancer mortality worldwide and represents one of the neoplasms with the highest incidence The most important risk factor for lung cancer is smoking Increasing age is also a risk factor for lung cancer Smoking cessation and the introduction of screening programs with low dose CT scans represent relevant measures of prevention Since the prognosis depends on the cancer stage earlier detection is fundamental to provide access to curative local treatments most notably surgery Recent years have witnessed remarkable strides in understanding the molecular landscape of non small cell lung cancer NSCLC and the development of novel therapeutic strategies The advent of precision oncology has revolutionized NSCLC treatment paradigms with targeted therapies directed against specific molecular alterations such as EGFR mutations ALK and ROS1 rearrangements and others Immune checkpoint inhibitors ICIs alone or in combination with chemotherapy have emerged as a cornerstone in the management of advanced NSCLC demonstrating durable responses and prolonged survival in a subset of patients More recently the introduction of immunotherapy in the perioperative setting allows for an increased cure rate in early stage lung cancer Furthermore adjuvant targeted therapy was shown to improve survival outcomes in resected EGFR mutated NSCLC

### Thyroid and Parathyroid Surgery: New and Emerging Concepts

Angela Pezzolla,Antonio Ambrosi ,Giovanni Docimo,Rita Laforgia,2025-11-05 New technologies and knowledge completely changed the diagnosis and surgical approach to thyroid and parathyroid diseases in the last decades Actually the number of detected thyroid nodules has increased significantly thanks to the ultrasound accuracy In addition the management of hyperparathyroidism has similarly evolved with an increase of endocrine diseases Prompt recognition and treatment of thyroid and parathyroid disorders could have a beneficial impact on health outcomes and could reduce the economic and social burden associated with the treatment of advanced diseases The practice of surgery for thyroid disease has seen many advances over the past decade with most developments related to technologies focusing on the reduction of complications Devices developed for surgical dissection with improved hemostasis and reduced heat transfer and hence collateral tissue damage are of particular interest in thyroid surgery Laryngeal nerve

injury and parathyroid gland dysfunction are complications of surgery with potentially devastating consequences and hence have been an area of focus for recent technological developments Conventional thyroidectomy has been the standard of care but other innovative techniques have been pioneered such as a gasless endoscopic transaxillary thyroidectomy GTET the bilateral axillary breast approach BABA behind the ear RA facelift approach and transoral endoscopic thyroidectomy via vestibular approach TOETVA The role of a multidisciplinary team which involves endocrine surgeons endocrinologists oncologists nuclear radiologists and radiotherapists is essential to find the right management of those patients The aim of this special issue is to provide a focus on new and emerging concepts about Thyroid and Parathyroid Surgery including surgical techniques with possible complications referral centers experience oncological outcomes and multidisciplinary approaches The contributions by leading experts in this field would reach this goal especially but not limited to with state of the art reviews on minimally invasive surgery or novel approaches to thyroid and parathyroid cancer

*Meniere's Disease: From Diagnosis to Treatment* Athanasia Korda, Sebastiaan Hammer, Bert De Foer, 2025-11-10 Meniere's disease is a set of rare inner ear disorders characterized by episodes of vertigo tinnitus aural fullness and fluctuating hearing loss Affecting approximately 0.2% of the population it is equally prevalent among men and women The condition first described by French physician Prosper Meniere in the 19th century presents significant diagnostic challenges due to its symptom overlap with other vestibular disorders Current understanding suggests that Meniere's disease is linked to dysfunction in the volume regulation of endolymphatic fluid within the inner ear although the complex physiological changes that initiate Meniere's disease are still not entirely understood Recent studies have focused on improving diagnostic accuracy through detailed clinical histories audiometry balance function tests and imaging studies like MRI to rule out other conditions Management of Meniere's disease is tailored to each patient focusing primarily upon relief from the debilitating vertigo and preserving hearing It includes lifestyle alterations like limits on sodium intake medications to control vertigo injections into the ear and physiotherapy Surgical interventions may be considered in more severe or refractory cases However the optimal treatment strategies for Meniere's disease remain areas of active investigation This Research Topic aims to address ongoing research regarding the cause of Meniere's Disease as well as new treatment strategies to enable a better understanding of the complexities of this disorder thereby offering a more optimistic outlook for those diagnosed with the condition Specific questions include identifying the underlying pathogenesis improving diagnostic accuracy and evaluating the efficacy of various treatment modalities Hypotheses to be tested may involve the genetic basis of the disease the role of endolymphatic fluid regulation and the effectiveness of novel therapeutic interventions To gather further insights into the complexities of Meniere's Disease we welcome any types of manuscripts supported by the journal pertaining but not limited to the following themes Diagnostic value of vestibular tests in Meniere's Disease Diagnostic value of electrocochleography in Meniere's Disease Pathogenesis of Meniere's Disease Genetic diagnosis of Meniere's Disease Differentiation of Meniere's Disease from
