Reddit In The Us Store Hours:

Web Development Solutions Christian Heilmann, Mark Norman Francis, 2007-05-25 As a web user you'll no doubt have noticed some of the breathtaking applications available in today's modern web such as Google Maps and Flickr desktop applications than the old style web sites you are used to. You've probably also wished that you could create such things and then thought nahhh I'd need to know a lot of complicated code to be able to even start creating sites like these. Well think again. There is a lot of complicated code involved in cutting edge Ajax style web applications but a lot of the hard work is already done for you and available on the Web. JavaScript libraries exist to provide most of that Ajax DOM Scripting functionality out of the box. Application programming interfaces (APIs) exist to allow you to transplant complicated applications such as Google Maps and Flickr right into your own web sites. And hosting services such as Flickr and YouTube provide all you need to store and retrieve your media be it images, video or whatever at your leisure without having to worry about bandwidth issues and file naming nightmares. All you need to know is enough to successfully wire together all this functionality successfully and responsibly and this book shows you how. It starts from the very beginning of your journey showing you what's available, what you need and how to set up an effective development environment. After a solid base has been built it shows you how to build up each aspect of your site including storing, retrieving and displaying content, adding images and video to your site, building effective site navigation and laying it all out beautifully using CSS, promoting your content so you will attract visitors to your site and adding special effects to enhance usability and design aesthetics all with ready-made functionality available on the Web. Life as a web developer has never been easier. Cryptomania Andrew R Chow, 2024-08-06 For fans of *Bad Blood* and *Too Big to Fail*, an explosive page-turning account of one of the largest financial frauds in US history, chronicling the utopian promises, human collateral and incineration of billions of dollars in the 2022 crypto crash by Time magazine's technology correspondent. As cryptocurrency rose in popularity during the pandemic, new converts bought into the idea that crypto would not only make them rich but would usher in imminent revolutions across art, finance, politics and gaming. Cryptocurrency caught the zeitgeist through figures like FTX CEO Sam Bankman-Fried, who only two years later would be convicted of one of the most calamitous acts of financial fraud in US history. During his meteoric rise, Sam Bankman-Fried outflanked idealists in the movement like Vitalik Buterin, who sought to build fairer, more democratic systems through Ethereum. Bankman-Fried pursued a growth-obsessed by any means approach to crypto, which proved seductive to those who just wanted to get rich. But this Silicon Valley-like approach also drove the creation of a spate of high-risk financial instruments that mirrored those of the 2008 financial crisis. Accused of misleading investors and mishandling funds, Bankman-Fried became a target of prosecutors. Now *Cryptomania* unfolds the tumultuous twenty months inside this male-dominated, overhyped industry that led to its downfall. Drawing on exclusive reporting and an extensive network in the global NFT community, Andrew Chow chronicles the battle for crypto's soul and the human toll of its economic meltdown.

Deconstructing Digital Capitalism and the Smart Society Mel van Elteren, 2025-01-01 Today's critics of big online platforms tend to consider privacy breaches monopolistic practices and the deployment of surveillance technologies as the main problems. Internet reformers suggest the answers to these issues reside in more and better regulations. While the questions of privacy, data, and size are indeed important, they are secondary, however, to a deeper set of concerns about platform ownership and control and who benefits from the current status quo. This book examines these issues and offers an historical overview and in-depth analysis of digital capitalism and its prevailing practices as it has become increasingly intertwined with various forms of online surveillance, behavior modification, and the delegation of managerial functions to algorithmic and automated systems in platform economies. The approach taken extends to the wider array of data-driven, internet-connected, and automated systems that involve digital devices and technologies centered on three smart spaces: the smart self, the smart home, and the smart city. Antitrust and other regulatory measures by the European Union and the United States that are aimed at restraining platform capitalism are also discussed. The focus in particular is on recent developments regarding artificial intelligence and their potentially harmful implications. This is followed by a critical look at proposals for more far-reaching institutional reforms revolving around the creation of forms of platform socialism that build partly on existing practices of platform cooperativism. The book concludes with a diagnosis of the global situation among the competing digital empires: the United States, the European Union, and China, and considers whether or not, under the present conditions, any form of

democratic platform socialism could materialize on a wider scale in the near future
