Time Machine is both free and easy to use but it's not the best choice for everyone and even if you do use Time Machine you'll certainly want to supplement it with other tools. You'll learn about key features to look for in a backup app and find tips on using several popular tools. You'll also discover the pros and cons of cloud backup services and get help choosing the right one. An online appendix covers dozens of apps and services. Shop for hardware. Depending on your needs and goals you may need one or more external SSDs or hard drives but the range of options, sizes, interfaces, speeds, and more can be bewildering. Joe helps you find the best backup hardware whether it's individual SSDs or hard drives, RAID's, NAS devices, or other options. Make and maintain backups. Once you've selected hardware and software you'll need to know how to make your first backup, set up your backups to run unattended, and test them regularly to make sure they're working as they should. This includes both versioned backups which contain old file versions and deleted files, and for some users, bootable or non-bootable data only clones. And you'll learn about strategies for keeping extra backups offsite. Operate Time Machine. If you choose Time Machine for versioned backups you'll learn how to back up and restore individual files and even an entire disk. You'll also discover why and how to encrypt Time Machine backups, how APFS snapshots work inside and outside Time Machine, and what to do if Time Machine misbehaves. Deal with unusual backup needs. If you deal with exceptionally large files such as audio and video files, spend a lot of time on the road away from your usual backup hardware, run Windows on your Mac, or rely on cloud services to store essential data, you'll want to take extra or different steps to make sure everything is safely backed up. You'll also learn various approaches to backing up and restoring data from Apple's Notes app. Manage your media. What happens when a backup drive fills up or becomes so old that you worry about its future reliability? What if you want to archive older files for posterity but not necessarily maintain them as part of your daily backups? Joe explains how to deal with media management tasks such as these. Recover lost data. Backing up data can be easy but restoring it is often more challenging. When you discover that data is missing, whether due to a disk error, theft, or a simple mistake, you need to know the exact steps needed to recover it and get back to work as soon as possible.
