Jones, 1958 Quantum methods develop mathematical models crystal structure magnetic susceptibility electrical and optical properties thermal properties etc Unabridged republication of the original 1936 edition **The Theory of the Properties of Metals and Alloys** Nevill Francis Mott, Harry Jones, 1945 *The Theory of the Properties of Metals and Alloys* Sir Nevill Francis Mott, 1943 *The theory of the properties of metals and alloys*, by N.F.Mott, and H.Jones Sir Nevill Francis Mott, **The Theory of the Properties of Metals and Alloys** H. Jones, 2000 **Journal of the Institute of Metals** Institute of Metals, 1929 Issues for Sept 1951 include the Bulletin *Chemical Abstracts* ,1924 The Industrial Arts Index ,1930 **Metals and Alloys** ,1929 **English Mechanic and Mirror of Science** ,1917 *Magnetic Properties of Metals and Alloys* American Society for Metals, Richard M. Bozorth, 1959 *Science Abstracts* ,1920 Scientific and Technical Aerospace Reports ,1967 **The Engineering Index** ,1922 **U.S. Government Research Reports** ,1962 **Decennial Index to Chemical Abstracts** ,1926 The Electrical Properties of Disordered Metals J. S. Dugdale, 1995-10-27 The theory of metallic conduction has until recently been confined to crystalline metals with atoms in regular arrays The discovery of solid amorphous alloys led to an explosion of measurements of their electronic properties and the emergence of a range of interesting low temperature phenomena The book describes in physical terms the theory of the electrical conductivity Hall coefficient magnetoresistance and thermopower of disordered metals and alloys The author begins by showing how conventional Boltzmann theory can be extended and modified when the mean free path of the conduction electrons becomes comparable with their wavelength and interionic separation Dugdale explores the consequences of this and tests the theory by applying it to experimental data on metallic glasses Designed as a self contained review the book will appeal to nonspecialist physicists metallurgists and chemists with an interest in disordered metals *Automotive Industries* ,1924 Vols for 1919 include an Annual statistical issue title varies **Science Abstracts** ,1961 **The Theory of Transformations in Metals and Alloys** J.W. Christian, 2002-12-24 This work is a classic reference text for metallurgists material scientists and crystallographers The first edition was published in 1965 The first part of that edition was revised and re published in 1975 and again in 1981 The present two part set represents the eagerly awaited full revision by the author of his seminal work now published as Parts I and II Professor Christian was one of the founding fathers of materials science and highly respected worldwide The new edition of his book deserves a place on the bookshelf of every materials science and engineering department Suitable thermal and mechanical treatments will produce extensive rearrangements of the atoms in metals and alloys and corresponding marked variations in physical and chemical properties This book describes how such changes in the atomic configuration are effected and discusses the associated kinetic and crystallographic features It deals with areas such as lattice geometry point defects dislocations stacking faults grain and interphase boundaries solid solutions

diffusion etc The first part covers the general theory while the second part is concerned with descriptions of specific types of transformations
