Supernormal Growth Jeffrey Zhengfu SHI,2015-12-30 Supernormal Growth confirms the supernormal achievements of China by providing founding statistics that China during the past 35 years experienced a synchronous high speed growth of investment consumption labor productivity with low volatility First of its kind Jeffrey Shi analyzes the unique structure and operating mechanism of China's existing market economy from a theoretic perspective and attributes China's supernormal growth to supernormal investment aroused by China's three dimensional 3 D market system which consists of competitive enterprises competitive local governments and central government and to supernormal purchasing power created by American's finance driving strategy In examining multiple challenges of China one by one the Shi proposes a whole conception of national strategic asset investment system which does not interfere with the operation of normal market but provides sustainable extra force to extend China's supernormal growth and also an innovative idea of relieving polarization of the poor and the rich through a 1 5th income distribution system so as to provide a panoramic view of China's supernormal growth strategy in the next 30 years Shi is not only a respected scholar but also a successful businessman giving Supernormal Growth a more valuable reference in answering many questions about China's development no matter in the past or future *China as a Model of Development* Al Imfeld,1976 Monograph on economic development in China presents an overview of economic conditions political development and social change etc One page bibliography *A New Development Model and China's Future* Deng Yingtao,2014-04-24 The need for China to find a new environmentally sustainable development path is accepted widely among Chinese scholars and policy makers This book makes available for

the first time to an English speaking audience Deng Yingtao's ground breaking book *New Development Model and China's Future* Published in 1991 the book was far ahead of its time Deng subjects the development model of the high income countries to rigorous analysis and explores the environmental implications of China following this model His clear conclusion is that the carrying capacity of the physical environment and nature is limited that economic and social development should not exceed the carrying capacity of resources and that China should not adopt the western development path Based on insights from economics engineering and human psychology the book analyses the environmental impact of the current western development model demonstrates the catastrophic impact this would have in terms of China's own development and in terms of China's relationship with the world and argues that China's rich intellectual and scientific tradition will allow Chinese people to play a central role in finding the solution to the profound environmental and development challenges the world currently faces **The Economic Development** Tien-tso Huang,1938
