## **The Territories Of Science And Religion:**

**The Territories of Science and Religion** Peter Harrison, 2015-04-06 Peter Harrison takes what we think we know about science and religion dismantles it and puts it back together again in a provocative new way. It is a mistake to assume as most do that the activities and achievements that are usually labeled religious and scientific have been more or less enduring features of the cultural landscape of the West. Harrison by setting out the history of science and religion to see when and where they come into being and to trace their mutations over time reveals how distinctively Western and modern they are. Only in the past few hundred years have religious beliefs and practices been bounded by a common notion and set apart from the secular. And the idea of the natural sciences as discrete activities conducted in isolation from religious and moral concerns is even more recent, dating from the nineteenth century. Putting the so-called opposition between religion and science into historical perspective as Harrison does here for the first time has profound implications for our understanding of the present and future relations between them. *The Landscapes of Science and Religion* Nick Spencer, Hannah

Waite, 2025-01-24 The relationship between science and religion has long been a heated debate and is becoming an ever more popular topic. The scientific capacity to manipulate and change humans and their environment through genetic engineering, life extension and AI is going to take a huge leap forward in the twenty-first century, provoking endless debates around humans playing God. But what do we mean by this? Asking this question is surprisingly hard work. Attempts to essentialise science let alone religion quickly run into trouble. Where are the boundaries? Whose definition of science is definitive? Which concept of religion is the authoritative one? Ultimately neither science nor religion can be pinned down to one single meaning or definition. Rather they encompass a family of definitions that relate to one another in a complex web of shifting ways. Drawing on extensive research with over a hundred leading thinkers in the UK including Martin Rees, Brian Cox, Susan Greenfield, A.C. Grayling, Ray Tallis, Linda Woodhead, Steve Bruce, Adam Rutherford, Robin Dunbar, Francesca Stavrakopoulou and Iain McGilchrist, *The Landscapes of Science and Religion* takes the much-needed step of asking what science and religion actually are before turning to the familiar question of how they relate to one another. Building on this by paying particular attention to those who sense some form of conflict here, Spencer and Waite explore where the perceived conflict really lies. What exactly are people disagreeing about when they disagree about science and religion and what if anything can we do to improve that disagreement and bring about a fruitful dialogue between these two important human endeavours?

**The Territories of Human Reason** Alister E. McGrath, 2019 *The Territories of Human Reason* is the first major study to explore the emergence of multiple situated rationalities. It focuses on the relation of the natural sciences and Christian theology but its approach can easily be extended to other disciplines. *Science, Religion, and the Human Future* Amanda Rees, Franziska E. Kohlt, Tom McLeish, Charlotte Sleigh, David Wilkinson, 2025-12-18 *Science Religion and the Human Future* Conflict, Collusion and Consequences demonstrates that the myth of an inevitable conflict between science and faith is

based on a misunderstanding of history with potentially adverse consequences for human futures The work focuses first upon ancient medieval and Islamic scholars and the intimate connections they made between theology and the investigation of the natural world and why we know so little about them Moving into the modern era it argues that one of the most concerning features of the science faith relationship was their collusion in defining and validating the civilising mission of Western imperialism This collusion recontextualises the creation of the conflict thesis Turning to the present day the book investigates episodes of scientific controversy in which effective science communication was hindered not as a result of a clash between science and faith but because of a close and unexamined entanglement between the two In cases ranging from space colonisation to AI climate change to Covid 19 the problem is not so much science's split from faith as the unexamined and problematic theologies that remain implicit within it Learning from these examples the book outlines some productive and non conflict based frameworks for talking about science and faith in the future

### **Science, Religion, and the Protestant Tradition**

James C. Ungureanu, 2019-10-03 The story of the conflict thesis between science and religion the notion of perennial conflict or warfare between the two is part of our modern self understanding As the story goes John William Draper 1811 1882 and Andrew Dickson White 1832 1918 constructed dramatic narratives in the nineteenth century that cast religion as the relentless enemy of scientific progress And yet despite its resilience in popular culture historians today have largely debunked the conflict thesis Unravelling its origins James Ungureanu argues that Draper and White actually hoped their narratives would preserve religious belief For them science was ultimately a scapegoat for a much larger and more important argument dating back to the Protestant Reformation where one theological tradition was pitted against another a more progressive liberal and diffusive Christianity against a more traditional conservative and orthodox Christianity By the mid nineteenth century narratives of conflict between science and religion were largely deployed between contending theological schools of thought However these narratives were later appropriated by secularists freethinkers and atheists as weapons against all religion By revisiting its origins development and popularization Ungureanu ultimately reveals that the conflict thesis was just one of the many unintended consequences of the Protestant Reformation

### **Christian Faith in an Age of Science**

William North Rice, 1904 The Poet of Science William North Rice, 1919 The Territories of Human Reason Alister E. McGrath, 2018 The Territories of Human Reason explores the emergence of multiple situated rationalities It focuses on the relation of the natural sciences and Christian theology but its approach can easily be extended to other disciplines It provides a robust intellectual framework for discussion of transdisciplinarity which has become a major theme in many parts of the academic world McGrath offers a major reappraisal of what it means to be rational which will have significant impact on older discussions of this theme He sets out to explore the consequences of the seemingly inexorable move away from the notion of a single universal rationality towards a plurality of cultural and domain specific methodologies and rationalities This groundbreaking volume will provoke intense discussion and debate
