**The Triple Helix** Richard C. Lewontin, 2000 One of our most brilliant evolutionary biologists Richard Lewontin here provides a concise accessible account of what his work has taught him about biology and about its relevance to human affairs In the process he exposes some of the common and troubling misconceptions that misdirect and stall our understanding of biology and evolution The Triple Helix Richard Lewontin, 2000 **Organism and Environment** Sonia E. Sultan, 2015

Over the past decade advances in both molecular developmental biology and evolutionary ecology have made possible a new understanding of organisms as dynamic systems interacting with their environments This innovative book synthesizes a wealth of recent research findings to examine how environments influence phenotypic expression in individual organisms ecological development or eco devo and how organisms in turn alter their environments niche construction A key argument explored throughout the book is that ecological interactions as well as natural selection are shaped by these dual organism environment effects This synthesis is particularly timely as biologists seek a unified contemporary framework in which to investigate the developmental outcomes ecological success and evolutionary prospects of organisms in rapidly changing environments Organism and Environment is an advanced text suitable for graduate level students taking seminar courses in ecology evolution and developmental biology as well as academics and researchers in these fields The Global Genome Eugene Thacker, 2006-09-08 How global biotechnology is redefining life itself In the age of global biotechnology DNA can exist as biological material in a test tube as a sequence in a computer database and as economically valuable information in a patent In The Global Genome Eugene Thacker asks us to consider the relationship of these three entities and argues that by their existence and their interrelationships they are fundamentally redefining the notion of biological life itself Biological science and the biotech industry are increasingly organized at a global level in large part because of the use of the Internet in exchanging biological data International genome sequencing efforts genomic databases the development of World Intellectual Property policies and the borderless business of biotech are all evidence of the global intersections of biology and informatics of genetic codes and computer codes Thacker points out the internal tension in the very concept of biotechnology the products are more tech than bio but the technology itself is fully biological composed of the biomaterial labor of genes proteins cells and tissues Is biotechnology a technology at all he asks or is it a notion of life itself that is inseparable from its use in the biotech industry The three sections of the book cover the three primary activities of biotechnology today the encoding of biological materials into digital form as in bioinformatics and genomics its recoding in various ways including the biocolonialism of mapping genetically isolated ethnic populations and the newly pervasive concern over biological security and its decoding back into biological materiality as in tissue engineering and regenerative medicine Thacker moves easily from science to philosophy to political economics enlivening his account with ideas from such thinkers as Georges Bataille Georges Canguilhem Michel Foucault Antonio Negri and Paul Virilio The global genome says Thacker makes it impossible to

consider biotechnology without the context of globalism      The Environmental Uncanny Brian A. Irwin,2024-06-27 Explores the increasing destitution of the human environment from a phenomenological perspective      **Proceedings of the Fourth International Forum on Decision Sciences** Xiang Li,Xiaofeng Xu,2017-01-22 These conference proceedings focus on the topics of data driven decision making stochastic decision making fuzzy decision making and their applications in real life problems Beijing University of Chemical Technology organized IFDS2016 the 4th International Forum on Decision Sciences with the theme Data Driven Decision Making The proceedings collect 84 selected papers presenting cutting edge modeling and solution methods and include numerous practical case studies making it a valuable resource for students researchers and practitioners working in the fields of decision science operations research management science and engineering
