The Spiritual Anatomy of Emotion Michael A. Jawer, 2009-05-21 A cutting edge examination of feelings not thoughts as the gateway to understanding consciousness Contends that emotion is

the greatest influence on personality development Offers a new perspective on immunity stress and psychosomatic conditions Explains how emotion is key to understanding out of body experience apparitions and other anomalous perceptions Contemporary science holds that the brain rules the body and generates all our feelings and perceptions Michael Jawer and Dr Marc Micozzi disagree They contend that it is our feelings that underlie our conscious selves and determine what we think and how we conduct our lives The less consciousness we have of our emotional being the more physical disturbances we are likely to have from ailments such as migraines fibromyalgia chronic fatigue and post traumatic stress to anomalous perceptions such as apparitions and involuntary out of body experiences Using the latest scientific research on immunity sensation stress cognition and emotional expression the authors demonstrate that the way we process our feelings provides a key to who is most likely to experience these phenomena and why They explain that emotion is a portal into the world of extraordinary perception and they provide the studies that validate the science behind telepathic dreams poltergeists and ESP The Spiritual Anatomy of Emotion challenges the prevailing belief that the brain must necessarily rule the body Far from being by products of neurochemistry the authors show that emotions are the key vehicle by which we can understand ourselves and our interactions with the world around us as well as our most intriguing and perennially baffling experiences

Mind Over Matter (illustrated) Michael Kerrigan, 2011-04-07 Is it possible to send thoughts into someone else's brain Can random number generators predict future events Why does a placebo work like a drug Is there a collective consciousness Even in this age of neurological discovery the mind is still largely uncharted territory What if there is more to the power of thought than we have yet grasped This enthralling introduction packed with illustrations and feature panels takes in an extraordinary breadth of topics with an even handed approach sifting fact from fantasy and fraud Encompassing the ideas of the greatest minds in Western intellectual and scientific history Aristotle Descartes Newton Einstein and more it ventures far beyond the confines of that tradition to address Eastern thought and other ways of knowing and exploring some of the enigmas that might conceivably be unlocked in the near future A smart dynamic approachable exploration offering a rare blend of compelling narrative and responsible research on the connections between mind and matter Marilyn Schlitz

neuroscientists as well as philosophers of mind It is a refreshing romp through the science and science fiction of consciousness
