SCADA(Supervisory Control and Data Acquisition): SCADA (supervisory control and data acquisition) is a category of software application program for process control, the gathering of data in real time from remote locations in order to control equipment and conditions. SCADA is used in power plants as well as in oil and gas refining, telecommunications, transportation, and water and waste control. SCADA systems include hardware and software components. The hardware gathers and feeds data into a computer that has SCADA software installed. The computer then processes this data and presents it in a timely manner. SCADA also records and logs all events into a file stored on a hard disk or sends them to a printer. SCADA applications warn when conditions become hazardous by sounding alarms.

SCADA diagram:

Application of DCS: Today's controllers have extensive computational capabilities and in addition to proportional, integral and derivative (PID) control, can generally perform logic and sequential control. Modern DCS also support neural networks and fuzzy applications.

DCSs are dedicated systems used to control manufacturing processes that are continuous or batch oriented such as:-

- Electrical power grids and electrical generation plants.
- Environmental control systems.
- Traffic signals.
- Radio signals.
- Water management systems.

Catherine Majumdar, 2012-12-06 This conference brought together experts from 15 countries to discuss application of Artificial Intelligence AI techniques to the nuclear industry It was apparent from the meeting that even those active in the field were surprised at the extent of work and the progress made There was a strong impression that application of this technology to nuclear power plants is inevitable The benefits to improved operation design and safety are simply too significant to be ignored This is a much different conclusion than might have been reached a few years ago when the technology was new and people were struggling to understand its significance We believe that this meeting reflects a major turning point for the technology It has moved from being a topic understood only by specialists to a situation where users are the most active people in the field A broad array of innovative work is described from all of the participating countries The activity in the u s is large and diverse Although there is no nationally focussed policy for AI research in the U S many of these activities are reported here Japan and France have a strong drive to integrate AI technology into their nuclear plants and this is reflected in these proceedings **A Laboratory manual for comparative vertebrate anatomy** Libbie Henrietta Hyman, 1922 *Laboratory Manual* Tennessee.
