The Dynamics Of Disaster:

The Dynamics of Disaster Susan W. Kieffer, 2013-10-21 Natural disasters bedevil our planet and each appears to be a unique event. Leading geologist Susan W. Kieffer shows how all disasters are connected. In 2011 there were fourteen natural calamities that each destroyed over a billion dollars worth of property in the United States alone. In 2012 Hurricane Sandy ravaged the East Coast and major earthquakes struck in Italy, the Philippines, Iran, and Afghanistan. In the first half of 2013 the awful drumbeat continued: a monster supertornado struck Moore, Oklahoma; a powerful earthquake shook Sichuan, China; a cyclone ravaged Queensland, Australia; massive floods inundated Jakarta, Indonesia; and the largest wildfire ever engulfed a large part of Colorado. Despite these events we still behave as if natural disasters are outliers. Why else would we continue to build new communities near active volcanoes on tectonically active faults on flood plains and in areas routinely lashed by vicious storms? A famous historian once observed that civilization exists by geologic consent, subject to change without notice. In the pages of this unique book, leading geologist Susan W. Kieffer provides a primer on most types of natural disasters: earthquakes, tsunamis, volcanoes, landslides, hurricanes, cyclones, and tornadoes. By taking us behind the scenes of the underlying geology that causes them, she shows why natural disasters are more common than we realize and that their impact on us will increase as our growing population crowds us into ever more vulnerable areas. Kieffer describes how natural disasters result from changes in state in a geologic system, much as when water turns to steam. By understanding what causes these changes of state we can begin to understand the dynamics of natural disasters. In the book's concluding chapter, Kieffer outlines how we might better prepare for and in some cases prevent future disasters. She also calls for the creation of an organization something akin to the Centers for Disease Control and Prevention but focused on pending natural disasters.

Dynamics of Disaster Barbara Allen, Rachel A. Dowty, Beech, 2013-09-13 Disasters are the result of complex interactions between social and natural forces acting at multiple scales, from the individual and community to the organisational, national and international level. Effective disaster planning, response and recovery require an understanding of these interacting forces and the role of power, knowledge and organisations. This book sheds new light on these dynamics and gives disaster scholars and practitioners new and valuable lessons for management and planning in practice. The authors draw on methods across the social sciences to examine disaster response and recovery as viewed by those in positions of authority and the recipients of operations. These first two sections examine cases from Hurricane Katrina, while the third part compares this to other international disasters to draw out general lessons and practical applications for disaster planning in any context. The authors also offer guidance for shaping institutional structures to better meet the needs of communities and residents.
