Nvidia Gpu Today Returns:

GPU Parallel Program Development Using CUDA Tolga Soyata, 2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs. This approach prepares the reader for the next generation and future generations of GPUs. The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific. At the same time, the book also provides platform dependent explanations that are as valuable as generalized GPU concepts. The book consists of three separate parts. It starts by explaining parallelism using CPU multi threading in Part I. A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads. Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation. Part II of the book introduces GPU massive parallelism. The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated. Because the core and memory structures of CPUs and GPUs are different, the results differ in interesting ways. The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs. Part III of the book provides pointers for readers who want to expand their horizons. It provides a brief introduction to popular CUDA libraries such as cuBLAS, cuFFT, NPP, and Thrust, the OpenCL programming language, an overview of GPU programming using other programming languages and API libraries such as Python, OpenCV, OpenGL, and Apple's Swift and Metal, and the deep learning library cuDNN. **IBM Power System S822LC for Big Data: Technical Overview and Introduction** Scott Vetter, David Barron, Alexandre Bicas Caldeira, Volker Haug, IBM Redbooks, 2017-08-29 This IBM Redpaper™ publication is a comprehensive guide that covers the IBM Power System S822LC for Big Data 8001 22C server that uses the latest IBM POWER8 processor technology and supports Linux operating systems. OSs. The objective of this paper is to introduce the Power S822LC for Big Data offerings and their relevant functions as related to targeted application workloads. The new Linux scale out systems provide differentiated performance, scalability, and low acquisition cost, including Consolidated server footprint with up to 66% more virtual machines (VMs) per server than competitive x86 servers. Superior data throughput and performance for high value Linux workloads such as big data analytic and industry applications. Up to 12 LFF drives that are installed within the chassis to meet storage rich application requirements. Superior application performance due to a 2x per core performance advantage over x86 based systems. Leadership data throughput enabled by POWER8 multithreading with up to 4x more threads than x86 designs. Acceleration of big data workloads with up to two GPUs and superior I/O bandwidth with Coherent Accelerator Processor Interface (CAPI). This publication is for professionals who want to acquire a better understanding of IBM Power Systems™ products. The intended audience includes Clients, Sales and marketing professionals, Technical support professionals, IBM Business Partners, Independent software vendors. **Hands-On GPU Computing with Python** Avimanyu
