

ESL Reading Comprehension + Writing Activity on "Sign Languages"

Student Name:

Sign languages are the unique and natural form of communication developed by the deaf community, consisting of hearing-impaired people using gestures, facial expressions, and body movements to express meaning. These languages are different from natural languages and their grammar follows very closely to existing natural languages, consisting of gestures, intonation, and body movements.

The history of sign language shows that it existed, though in various other names, and in various regions of the world, much earlier than through documentation of these names. However, written records that could be used to prove the existence of sign languages did not exist, because there was no need for written records for the deaf community until a relatively very recent time.

The evolution and development of sign language goes back to the 18th century. French educators, then known as the "Panthéon" educators, started teaching the deaf children in their school. They used gestures of their own to teach the children and the children, in turn, used these gestures to communicate with each other. This is how sign language was born. The first deaf school in the United States was established in 1817, by Thomas Hopkins Gallaudet, who was a hearing person. He learned sign language from a deaf teacher, and he started teaching sign language to other deaf students. This is how sign language spread to the United States.

Learning to communicate through sign languages is not an easy task. There are many different sign languages, including American Sign Language (ASL), British Sign Language (BSL), and French Sign Language (FSL). These languages are not related to each other, but they all follow a similar structure of a sign language. This means, if you learn one sign language, it is easier to learn the other sign languages, as they all follow a similar structure of a sign language.

The structure of sign languages is different. They are gestural, i.e., movements, gestures, and intonation, are used to express meaning in their signs. This means, a sign language is a non-verbal form of communication, but it is also a form of communication.

Questions:

- What is sign language and what is its purpose?
- What are the different types of sign languages?
- How does the American Sign Language (ASL) work?
- What is the difference between sign language and natural language?
- What is the importance of sign language in deaf education?
- What is the history of sign language?
- What is the structure of sign language?
- What are the gestures used in sign language?
- What is the intonation in sign language?
- What is the purpose of sign language in deaf education?
- What is the difference between sign language and natural language?
- What is the importance of sign language in deaf education?
- What is the history of sign language?

Writing Activity:

Using the questions in the reading comprehension section, write a short essay on any one of the following topics. You can also add your own ideas to the essay. The essay should be at least 100 words long. You can use the following sign language gestures to help you express your ideas:

Using sign language gestures can help you express your ideas more clearly. These gestures are commonly used in sign language, but they can also be used in natural language. For example, when you say "I am happy", you can use the "handshake" gesture, where you hold your hands together and move them up and down. This can help you express your ideas more clearly and effectively.

Using sign language gestures can also help you express your ideas more clearly. These gestures are commonly used in sign language, but they can also be used in natural language. For example, when you say "I am happy", you can use the "handshake" gesture, where you hold your hands together and move them up and down. This can help you express your ideas more clearly and effectively.

Simplified Signs: A Manual Sign-Communication System for Special Populations, Volume 1. John D.

Bonvillian, Nicole Kissane Lee, Tracy T. Dooley, Filip T. Loncke, 2020-07-30 Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension memorization and formation by limiting the complexity of the motor skills required to form each sign and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project and places the Simplified Sign System in a wider context of sign usage historically and by different populations. Volume 2 presents the lexicon of signs totalling approximately 1000 signs each with a clear illustration and a written description of how the sign is formed as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism or aphasia, it may also assist the communication needs of a wider audience such as healthcare professionals, aid workers, military personnel, travellers or parents and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work constitutes a valuable resource that will enhance the communicative interactions of many different people and will be of great interest to researchers and educators alike.
