Linear Algebra, Data Science, and Machine Learning Jeff Calder, Peter J. Olver, 2025-08-25 This text provides a mathematically rigorous introduction to modern methods of machine learning and data analysis at the advanced undergraduate beginning graduate level. The book is self-contained and requires minimal mathematical prerequisites. There is a strong focus on learning how and why algorithms work as well as developing facility with their practical applications. Apart from basic calculus the underlying mathematics linear algebra optimization elementary probability graph theory and statistics is developed from scratch in a form best suited to the overall goals. In particular the wide ranging linear algebra components are unique in their ordering and choice of topics emphasizing those parts of the theory and techniques that are used in contemporary machine learning and data analysis. The book will provide a firm foundation to the reader whose goal is to work on applications of machine learning and/or research into the further development of this highly active field of contemporary applied mathematics. To introduce the reader to a broad range of machine learning algorithms and how they are used in real world applications the programming language Python is employed and offers a platform for many of the computational exercises. Python notebooks complementing various topics in the book are available on a companion GitHub site specified in the Preface and can be easily accessed by scanning the QR codes or clicking on the links provided within the text. Exercises appear at the end of each section including basic ones designed to test comprehension and computational skills while others range over proofs not supplied in the text practical computations additional theoretical results and further developments in the subject. The Students Solutions Manual may be accessed from GitHub. Instructors may apply for access to the Instructors Solutions Manual from the link supplied on the text's Springer website. The book can be used in a junior or senior level course for students majoring in mathematics with a focus on applications as well as students from other disciplines who desire to learn the tools of modern applied linear algebra and optimization. It may also be used as an

introduction to fundamental techniques in data science and machine learning for advanced undergraduate and graduate students or researchers from other areas including statistics computer science engineering biology economics and finance and so on

Mechanics of Materials Roy R. Craig, Jr., Eric M. Exercises in Numerical Linear Algebra and Matrix Factorizations Tom Lyche, Georg Muntingh, Øyvind Ryan, 2020-11-02 To put the world of linear algebra to advanced use it is not enough to merely understand the theory there is a significant gap between the theory of linear algebra and its myriad expressions in nearly every computational domain To bridge this gap it is essential to process the theory by solving many exercises thus obtaining a firmer grasp of its diverse applications Similarly from a theoretical perspective diving into the literature on advanced linear algebra often reveals more and more topics that are deferred to exercises instead of being treated in the main text As exercises grow more complex and numerous it becomes increasingly important to provide supporting material and guidelines on how to solve them supporting students learning process This book provides precisely this type of supporting material for the textbook Numerical Linear Algebra and Matrix Factorizations published as Vol 22 of Springer's Texts in Computational Science and Engineering series Instead of omitting details or merely providing rough outlines this book offers detailed proofs and connects the solutions to the corresponding results in the textbook For the algorithmic exercises the utmost level of detail is provided in the form of MATLAB implementations Both the textbook and solutions are self contained This book and the textbook are of similar length demonstrating that solutions should not be considered a minor aspect when learning at advanced levels
