This authoritative book serves as an introductory text to optimization at the senior undergraduate and beginning graduate levels. With consistently accessible and elementary treatment of all topics, *An Introduction to Optimization* Second Edition helps students build a solid working knowledge of the field, including unconstrained optimization, linear programming, and constrained optimization. Supplemented with more than one hundred tables and illustrations, an extensive bibliography, and numerous worked examples to illustrate both theory and algorithms, this book also provides a review of the required mathematical background material. A mathematical discussion at a level accessible to MBA and business students. A treatment of both linear and nonlinear programming. An introduction to recent developments, including neural networks, genetic algorithms, and interior point methods. A chapter on the use of descent algorithms for the training of feedforward neural networks. Exercise problems after every chapter, many new to this edition. MATLAB® exercises and examples. Accompanying Instructor's Solutions Manual available on request. *An Introduction to Optimization* Second Edition helps students prepare for the advanced topics and technological developments that lie ahead. It is also a useful book for researchers and professionals in mathematics, electrical engineering, economics, statistics, and business. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department.

Linear Optimization and Extensions Dimitris Alevras, Manfred W. Padberg, 2001 Books on a technical topic like linear programming without exercises ignore the principal beneficiary of the endeavor of writing a book, namely the student who learns best by doing course. Books with exercises, if they are challenging or at least to some extent so, exercises of need a solutions manual so that students can have recourse to it when they need it. Here we give solutions to all exercises and case studies of M. Padberg's *Linear Optimization and Extensions* second edition, Springer Verlag Berlin 1999. In addition

we have included several new exercises and taken the opportunity to correct and change some of the exercises of the book. Here and in the main text of the present volume the terms book text etc designate the second edition of Padberg's LPbook and the page and formula references refer to that edition as well. All new and changed exercises are marked by a star in this volume. The changes that we have made in the original exercises are inconsequential for the main part of the original text where several of the exercises especially in Chapter 9 are used on several occasions in the proof arguments. None of the exercises that are used in the estimations etc have been changed.
