Solving Problems In Technical Communication

Solving Problems in Technical Communication Johndan Johnson-Eilola, Stuart A. Selber, 2024-05-31 The field of technical communication is rapidly expanding in both the academic world and the private sector yet a problematic divide remains between theory and practice. Here Stuart A. Selber and Johndan Johnson Eilola both respected scholars and teachers of technical communication effectively bridge that gap. *Solving Problems in Technical Communication* collects the latest research and theory in the field and applies it to real world problems faced by practitioners. Problems involving ethics, intercultural communication, new media, and other areas that determine the boundaries of the discipline. The book is structured in four parts offering an overview of the field situating it historically and culturally, reviewing various theoretical approaches to technical communication, and examining how the field can be advanced by drawing on diverse perspectives. Timely, informed, and practical, *Solving Problems in Technical Communication* will be an essential tool for undergraduates and graduate students as they begin the transition from classroom to career.

Design Thinking in Technical Communication Jason Tham, 2021-05-18 This book explicates the relationships between design thinking, critical making, and socially responsive technical communication. It leverages the recent technology-powered DIY culture called the Maker Movement to identify how citizen innovation can inform cutting-edge social innovation that advocates for equitable change and progress on today's wicked problems. After offering a succinct account of the origin and recent history of design thinking along with its connections to the design paradigm in writing studies, the book analyzes maker culture and its influences on innovation and education through an ethnographic study of three academic makerspaces. It offers opportunities to cultivate a sense of critical changemaking in technical communication students and practitioners, showcasing examples of socially responsive innovation and expert interviews that urge a disciplinary attention to social justice advocacy and an embrace of the design thinking principle of radical collaboration. The value of design thinking methodologies for teaching and practicing socially responsible technical communication are demonstrated as the author argues for a future in the field that sees its constituents as leaders in radical innovation to solve wicked social problems. This book is essential reading for instructors, students, and practitioners of technical communication and can be used as a supplemental text for graduate and undergraduate courses in usability and user-centered design and research.

Artificial Intelligence in Technical Communication Ann Hill Duin, Isabel Pedersen, 2023-06-01. This book enables readers to interrogate the technical rhetorical, theoretical, and socio ethical challenges and opportunities involved in the development and adoption of augmentation technologies and artificial intelligence. The core of our human experience and identity is forever affected by the rise of augmentation technologies that enhance human capability or productivity. These technologies can add cognitive, physical, sensory, and emotional enhancements to the body or environment. This book demonstrates the benefits, risks, and relevance of emerging augmentation technologies such as brain-computer interaction devices for cognitive enhancement, robots marketed to improve human social interaction, wearables that extend human senses, augment creative abilities, or overcome physical limitations, implantables that amplify intelligence or memory, and devices, AI generators, or algorithms for emotional augmentation. It allows scholars and professionals to understand the impact of these technologies, improve digital and AI literacy, and practice new methods for their design and adoption. This book will be vital reading for students, scholars, and professionals in fields including technical communication, UX design, computer science, human factors, information technology, sociology of technology, and ethics.
