Web Data Mining Bing Liu, 2011-06-25 Liu has written a comprehensive text on Web mining which consists of two parts. The first part covers the data mining and machine learning foundations where all the essential concepts and algorithms of data mining and machine learning are presented. The second part covers the key topics of Web mining where Web crawling, search, social network analysis, structured data extraction, information integration, opinion mining, and sentiment analysis. Web usage mining, query log mining, computational advertising, and recommender systems are all treated both in breadth and in depth. His book thus brings all the related concepts and algorithms together to form an authoritative and coherent text. The book offers a rich blend of theory and practice. It is suitable for students, researchers, and practitioners interested in Web mining and data mining both as a learning text and as a reference book. Professors can readily use it for classes on data mining, Web mining, and text mining. Additional teaching materials such as lecture slides, datasets, and implemented algorithms are available online.

Data Mining Jiawei Han, Jian Pei, Hanghang Tong, 2022-07-02 Data Mining: Concepts and Techniques, Fourth Edition, introduces concepts, principles, and methods for mining patterns, knowledge, and models from various kinds of data for diverse applications. Specifically, it delves into the processes for uncovering patterns and knowledge from massive collections of data, known as knowledge discovery from data or KDD. It focuses on the feasibility, usefulness, effectiveness, and scalability of data mining techniques for large data sets. After an introduction to the concept of data mining, the authors explain the methods for preprocessing, characterizing, and warehousing data. They then partition the data mining methods into several major tasks, introducing concepts and methods for mining frequent patterns, associations, and correlations for large data sets, data classification, and model construction, cluster analysis, and outlier detection. Concepts and methods for deep learning are systematically introduced as one chapter. Finally, the book covers the trends, applications, and research frontiers in data mining. Presents a comprehensive new chapter on deep learning, including improving training of deep learning models, convolutional neural networks, recurrent neural networks, and graph neural networks. Addresses advanced topics in one dedicated chapter: data mining trends and research frontiers, including mining rich data types, text, spatiotemporal data, and graph networks, data mining applications.
