Who's #1? Amy N. Langville, Carl D. Meyer, 2012-02-26 The mathematics behind today's most widely used rating and ranking methods A website's ranking on Google can spell the difference between success and failure for a new business NCAA football ratings determine which schools get to play for the big money in postseason bowl games Product ratings influence everything from the clothes we wear to the movies we select on Netflix Ratings and rankings are everywhere but how exactly do they work Who's 1 offers an engaging and accessible account of how scientific rating and ranking methods are created and applied to a variety of uses Amy Langville and Carl Meyer provide the first comprehensive overview of the mathematical algorithms and methods used to rate and rank sports teams political candidates products Web pages and more In a series of interesting asides Langville and Meyer provide fascinating insights into the ingenious contributions of many of the field's pioneers They survey and compare the different methods employed today showing why their strengths and weaknesses depend on the underlying goal and explaining why and when a given method should be considered Langville and Meyer also describe what can and can't be expected from the most widely used systems The science of rating and ranking touches virtually every facet of our lives and now you don't need to be an expert to understand how it really works Who's 1 is the definitive introduction to the subject It features easy to understand examples and interesting trivia and historical facts and much of the required mathematics is included *Determining the College Football Playoff: Weighted Wins, A Better Approach* Ray D. Theis, Mark G. Terwilliger, 2021-09-21 In this book we explore the history of college football and in particular the mythical college championship from 1869 to the present day For several years different media outlets took it upon themselves to declare a national championship which led to nothing short of confusion In one year four different teams were named champion This chaotic situation and accompanying controversy ultimately led to the creation of the Bowl Championship Series or BCS Initially the BCS selection was based on a formula that incorporated several polls and computer models However the proprietary nature of the computer models and the complexity of the mathematics used to combine the data sources to arrive at the final selection did very little to quiet the controversy This led to the creation of a selection committee to choose the four best teams to compete in a four team playoff Again controversy has ensued with many questioning the politics and nebulous capricious nature of the criteria We have created an alternate model which we have dubbed the weighted wins system that defines a simple unbiased and consistent mechanism for evaluating and comparing the records of the teams in the NCAA's Bowl Subdivision We have compared the results of the weighted wins model against forty years of actual game results and found that it generates very similar outcomes The primary difference is that it completely removes politics from the selection process and offers a clear path to the playoffs for all members of the Bowl Subdivision *Recommended Reference Books for Small and Medium-Sized Libraries and Media Centers, 1989* Bohdan S.
