When you take a discount, you are like 20% off. It means you're paying less than the original price. Here's how you figure out the new price:

1. **Step-by-step:**

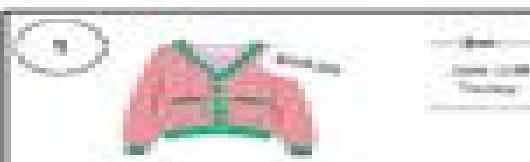

1. Find the discount amount.
2. Multiply the original price by the discount percent (as a decimal).
3. $\text{New Price} = \text{Original Price} - \text{Discount}$
4. Subtract the discount from the original price.
5. $\text{New Price} = \text{Original Price} - \text{Discount}$.

Example:

Original price: \$100 and a 20% off. What is the new price?

1. $20\% \text{ of } 100 = 20$
2. $100 - 20 = 80$
3. New Price
4. $100 - 20 = 80$
5. The new price is \$80.

Directions: Identify the amount that will be taken off the original price, and then identify the new price after discount. Round to the nearest hundredth if needed (at the discount step).
