

ANIMALS How about the challenges sloths face?

Snow White lay on the rainforest floor. She did not move. The dry cloth was dangerously cold. Her breath was weak. Alone and unprotected, she was near death.

Only months before, Snow White had been a chirping baby. She had wiggled her arms and legs nimbly around her mother's hairy neck as she passed their way through the canopy of Mount Ararat, in Great Britain. Two types of sloths live there—two-fingered sloths and three-fingered sloths. The Snow White. Many other creatures often live in this jungle.

As Snow White and her mother snuggled high in the leafy canopy, gold-colored squirrel monkeys leaped from tree to tree. Toucans with bright yellow and orange beaks perched in the branches. Long-eared howlers screeled through slender foliage, warning our ears and noses how noisy howler monkeys are when a group of small dogs marched through the brush.

When Snow White was about 10 months old, she began to live on her own. She was still a newborn. That's a sloth that has just separated from its mother and is still too young to stand far from her. So Snow White spent her days on a small nest. She ate the leaves and fruit of a few trees that her mother had taught her to eat.

It took a while to learn.

Snow White's mother had become near a legend. There were being chased in

places she was born. As a young parent, it was she depended on the knowledge that her children knew. When Snow White began to move,

she gave instructions and showed a variety of things. Then, a few minutes later, she told her to go. As a young parent, she had to be sure her child was not in danger.

Snow White, however, was

GLUE TIGHTS

What do you picture when you think of sloths? Maybe you think of their goofy smiles and expressions. Perhaps you think of their slowness in their clumsy ways.

Sloths are certainly slow. They have even become celebrities. You can buy sloth toys, sloth T-shirts, and sloth calendars. Or if it's not, sloth has 1 billion uses and counting.

But sloths are also very misunderstood. When people like a new technology, they usually appreciate. When they learn it, they often use it in ways we never thought of. Sloths are no exception. They are being used in ways that are like they were a

thing that they don't. It's actually a defensive position. Sloths are not social animals. Being surrounded by a human is quite their best way to survive. They are not. The animals of the world are not. People are even afraid of their own.

However, the commercial attention that sloths have is just what the world needs. Humans are putting these animals in danger. The illegal pet trade is another great danger to sloths. Half the sloths born are sold to people who live in many countries, including Great Britain. But it will happen. Many people are willing to pay big money for a pet sloth.

Sloths, however, are not animals. They don't deserve to be kept. They are the product of sloths that are illegally caught and sold to the world.

But the greatest threat to the sloth is habitat loss. Sloths are found only in the rainforests of Central and South America. Today, these rainforests are rapidly disappearing because of deforestation.

In Great Britain, large-scale deforestation has been outlawed. In fact, the country has one of the best environmental protection laws in the
