Universal Artificial Intelligence Marcus Hutter, 2005-12-29 Personal motivation The dream of creating artificial devices that reach or outperform human intelligence is an old one It is also one of the dreams of my youth which have never left me What makes this challenge so interesting A solution would have enormous implications on our society and there are reasons to believe that the AI problem can be solved in my expected lifetime So it's worth sticking to it for a lifetime even if it takes 30 years or so to reap the benefits The AI problem The science of artificial intelligence AI may be defined as the construction of intelligent systems and their analysis A natural definition of a system is anything that has an input and an output stream Intelligence is more complicated It can have many faces like creativity solving problems pattern recognition classification learning induction deduction building analogies optimization surviving in an environment language processing and knowledge A formal definition incorporating every aspect of intelligence however seems difficult Most if not all known facets of intelligence can be formulated as goal driven or more precisely as maximizing some utility function It is therefore sufficient to study goal driven AI e.g. the biological goal of animals and humans is to survive and spread The goal of AI systems should be to be useful to humans

A.I. Artificial intelligence, introduction to the issues and current trends

Pavel Bartoš, 2023-01-01 Artificial Intelligence AI often referred to by the acronym Artificial Intelligence is a fascinating and dynamically developing field that has far reaching implications for various sectors of human activity At its core it is the simulation of human intelligence in computer systems AI is capable of learning planning problem solving speech recognition visual perception and many other cognitive functions that were previously considered the exclusive domain of human thought

Supporting Personalized Learning and Students' Skill Development With AI Khaldi, Mohamed, 2025-03-05 The integration of artificial intelligence AI into education has the potential to fundamentally change pedagogical practices with a positive impact on all aspects of teaching and learning It is possible to design personalized learning paths for each learner including those with special needs or who speak different languages by adjusting the content and pace according to their strengths and weaknesses AI tools such as virtual assistants and interactive educational applications can give immediate feedback to learners which is of paramount importance to keep them engaged and encourage continuous learning Similarly teachers can view AI based data analytics and recommendations to improve their teaching methods and adapt their strategies in real time Supporting Personalized Learning and Students Skill Development With AI offers an in depth exploration of how to integrate AI technology into pedagogical practice to revolutionize education by exploring all aspects of AI in education from intelligent tutoring systems that tailor lessons to the needs of each learner to automating administrative tasks that save teachers time While addressing the ethical and practical challenges of this transformation it highlights the urgent need to equip educators with the skills they need to benefit from AI Covering topics such as autonomous learning emotion detection and digital literacy this book is an excellent resource for teachers school administrators educational decision makers computer
