The 1 2 3 Of Modular Forms:

The 1-2-3 of Modular Forms Jan Hendrik Bruinier,Gerard van der Geer,Günter Harder,Don Zagier,2008-02-10 This book grew out of three series of lectures given at the summer school on Modular Forms and their Applications at the Sophus Lie Conference Center in Nordfjordeid in June 2004 The first series treats the classical one variable theory of elliptic modular forms The second series presents the theory of Hilbert modular forms in two variables and Hilbert modular surfaces The third series gives an introduction to Siegel modular forms and discusses a conjecture by Harder It also contains Harder s original manuscript with the conjecture Each part treats a number of beautiful applications **Galois Theory and Modular Forms** Ki-ichiro Hashimoto,Katsuya Miyake,Hiroaki Nakamura,2013-12-01 This volume is an outgrowth of the research project The Inverse Ga lois Problem and its Application to Number Theory which was carried out in three academic years from 1999 to 2001 with the support of the Grant in Aid for Scientific Research B 1 No 11440013 In September 2001 an international conference Galois Theory and Modular Forms was held at Tokyo Metropolitan University after some preparatory work shops and symposia in previous years The title of this book came from that of the conference and the authors were participants of those meet All of the articles here were critically refereed by experts Some of ings these articles give well prepared surveys on branches of research areas and many articles aim to bear the latest research results accompanied with carefully written expository introductions When we started our re earch project we picked up three areas to investigate under the key word Galois groups namely generic poly nomials to be applied to number theory Galois coverings of algebraic curves to study new type of representations of absolute Galois groups and explicitly described Shimura varieties to understand well the Ga lois structures of some interesting polynomials including Brumer s sextic for the alternating group of degree 5 The topics of the articles in this volume are widely spread as a result At a first glance some readers may think this book somewhat unfocussed **Modular Forms and Related Topics in Number Theory** B. Ramakrishnan,Bernhard Heim,Brundaban Sahu,2020-11-24 This book collects the papers presented at the Conference on Number Theory held at the Kerala School of Mathematics Kozhikode Kerala India from December 10 14 2018 The conference aimed at bringing the active number theorists and researchers in automorphic forms and allied areas to demonstrate their current research works This book benefits young research scholars postdoctoral fellows and young faculty members working in these areas of research **The Art of Doing Algebraic Geometry** Thomas Dedieu,Flaminio Flamini,Claudio Fontanari,Concettina Galati,Rita Pardini,2023-04-14 This volume is dedicated to Ciro Ciliberto on the occasion of his 70th birthday and contains refereed papers offering an overview of important parts of current research in algebraic geometry and related research in the history of mathematics It presents original research as well as surveys both providing a valuable overview of the current state of the art of the covered topics and reflecting the versatility of the scientific interests of Ciro Ciliberto **Number Theory and Modular Forms** Bruce C. Berndt,Ken Ono,2013-11-11 Robert A Rankin one of the world s foremost authorities

on modular forms and a founding editor of The Ramanujan Journal died on January 27 2001 at the age of 85 Rankin had broad interests and contributed fundamental papers in a wide variety of areas within number theory geometry analysis and algebra To commemorate Rankin s life and work the editors have collected together 25 papers by several eminent mathematicians reflecting Rankin s extensive range of interests within number theory Many of these papers reflect Rankin s primary focus in modular forms It is the editors fervent hope that mathematicians will be stimulated by these papers and gain a greater appreciation for Rankin s contributions to mathematics This volume would be an inspiration to students and researchers in the areas of number theory and modular forms   **Modular Forms, a Computational Approach** William A. Stein,2007-02-13 This marvellous and highly original book fills a significant gap in the extensive literature on classical modular forms This is not just yet another introductory text to this theory though it could certainly be used as such in conjunction with more traditional treatments Its novelty lies in its computational emphasis throughout Stein not only defines what modular forms are but shows in illuminating detail how one can compute everything about them in practice This is illustrated throughout the book with examples from his own entirely free software package SAGE which really bring the subject to life while not detracting in any way from its theoretical beauty The author is the leading expert in computations with modular forms and what he says on this subject is all tried and tested and based on his extensive experience As well as being an invaluable companion to those learning the theory in a more traditional way this book will be a great help to those who wish to use modular forms in applications such as in the explicit solution of Diophantine equations There is also a useful Appendix by Gunnells on extensions to more general modular forms which has enough in it to inspire many PhD theses for years to come While the book s main readership will be graduate students in number theory it will also be accessible to advanced undergraduates and useful to both specialists and non specialists in number theory John E Cremona University of Nottingham William Stein is an associate professor of mathematics at the University of Washington at Seattle He earned a PhD in mathematics from UC Berkeley and has held positions at Harvard University and UC San Diego His current research interests lie in modular forms elliptic curves and computational mathematics   Automorphic Forms And Zeta Functions - Proceedings Of The Conference In Memory Of Tsuneo Arakawa Masanobu Kaneko,Siegfried Bocherer,Tomoyoshi Ibukiyama,Fumihiro Sato,2006-01-03 This volume contains a valuable collection of articles presented at a conference on Automorphic Forms and Zeta Functions in memory of Tsuneo Arakawa an eminent researcher in modular forms in several variables and zeta functions The book begins with a review of his works followed by 16 articles by experts in the fields including H Aoki R Berndt K Hashimoto S Hayashida Y Hironaka H Katsurada W Kohnen A Krieg A Murase H Narita T Oda B Roberts R Schmidt R Schulze Pillot N Skoruppa T Sugano and D Zagier A variety of topics in the theory of modular forms and zeta functions are covered Theta series and the basis problems Jacobi forms automorphic forms on Sp 1 q double zeta functions special values of zeta and L functions many of which are closely related to Arakawa s works This collection of

papers illustrates Arakawa s contributions and the current trends in modular forms in several variables and related zeta functions   *Automorphic Forms Beyond GL_2* Ellen Elizabeth Eischen,Wee Teck Gan,Aaron Pollack,Zhiwei Yun,2024-03-26 The Langlands program has been a very active and central field in mathematics ever since its conception over 50 years ago It connects number theory representation theory and arithmetic geometry and other fields in a profound way There are nevertheless very few expository accounts beyond the GL 2 case This book features expository accounts of several topics on automorphic forms on higher rank groups including rationality questions on unitary group theta lifts and their applications to Arthur s conjectures quaternionic modular forms and automorphic forms over functions fields and their applications to inverse Galois problems It is based on the lecture notes prepared for the twenty fifth Arizona Winter School on Automorphic Forms beyond GL 2 held March 5 9 2022 at the University of Arizona in Tucson The speakers were Ellen Eischen Wee Teck Gan Aaron Pollack and Zhiwei Yun The exposition of the book is in a style accessible to students entering the field Advanced graduate students as well as researchers will find this a valuable introduction to various important and very active research areas   *Geometry, Algebra, Number Theory, and Their Information Technology Applications* Amir Akbary,Sanoli Gun,2018-09-18 This volume contains proceedings of two conferences held in Toronto Canada and Kozhikode India in 2016 in honor of the 60th birthday of Professor Kumar Murty The meetings were focused on several aspects of number theory The theory of automorphic forms and their associated L functions Arithmetic geometry with special emphasis on algebraic cycles Shimura varieties and explicit methods in the theory of abelian varieties The emerging applications of number theory in information technology Kumar Murty has been a substantial influence in these topics and the two conferences were aimed at honoring his many contributions to number theory arithmetic geometry and information technology   **Dynamical, Spectral, and Arithmetic Zeta Functions** Michel Laurent Lapidus,Machiel Van Frankenhuysen,2001 The original zeta function was studied by Riemann as part of his investigation of the distribution of prime numbers Other sorts of zeta functions were defined for number theoretic purposes such as the study of primes in arithmetic progressions This led to the development of L functions which now have several guises It eventually became clear that the basic construction used for number theoretic zeta functions can also be used in other settings such as dynamics geometry and spectral theory with remarkable results This volume grew out of the special session on dynamical spectral and arithmetic zeta functions held at the annual meeting of the American Mathematical Society in San Antonio but also includes four articles that were invited to be part of the collection The purpose of the meeting was to bring together leading researchers to find links and analogies between their fields and to explore new methods The papers discuss dynamical systems spectral geometry on hyperbolic manifolds trace formulas in geometry and in arithmetic as well as computational work on the Riemann zeta function Each article employs techniques of zeta functions The book unifies the application of these techniques in spectral geometry fractal geometry and number theory It is a comprehensive volume offering up to date

research It should be useful to both graduate students and confirmed researchers   **Computational Aspects of Modular Forms and Galois Representations** Bas Edixhoven,Jean-Marc Couveignes,1940 This book represents a major step forward from explicit class field theory and it could be described as the start of the explicit Langlands program   Modular Forms with Integral and Half-Integral Weights Xueli Wang,Dingyi Pei,2013-02-20 Modular Forms with Integral and Half Integral Weights focuses on the fundamental theory of modular forms of one variable with integral and half integral weights The main theme of the book is the theory of Eisenstein series It is a fundamental problem to construct a basis of the orthogonal complement of the space of cusp forms as is well known this space is spanned by Eisenstein series for any weight greater than or equal to 2 The book proves that the conclusion holds true for weight 3 2 by explicitly constructing a basis of the orthogonal complement of the space of cusp forms The problem for weight 1 2 which was solved by Serre and Stark will also be discussed in this book The book provides readers not only basic knowledge on this topic but also a general survey of modern investigation methods of modular forms with integral and half integral weights It will be of significant interest to researchers and practitioners in modular forms of mathematics Dr Xueli Wang is a Professor at South China Normal University China Dingyi Pei is a Professor at Guangzhou University China   *Philosophical Transactions of the Royal Society of London* ,1901   **Revue Semestrielle Des Publications Mathématiques** ,1904   **The Collected Mathematical Papers of Arthur Cayley** Arthur Cayley,1896   Annals of Mathematics ,1918 Founded in 1884 Annals of Mathematics publishes research papers in pure mathematics   **Proceedings of Symposia in Pure Mathematics** ,1976   **The Journal of the Indian Mathematical Society** ,1916 Vols for 1923 32 include separately paged sections Notes and questions and Progress report   The Quarterly Journal of Pure and Applied Mathematics ,1920   *Transactions of the American Mathematical Society* ,1919
