Synthetic Biodegradable Polymer Scaffolds Tissue Engineering:

Synthetic Biodegradable Polymer Scaffolds Anthony Atala, David J. Mooney, 2013-11-11 This body of work represents the first volume of a book series covering the field of tissue engineering Tissue engineering which refers to a category of therapeutic or diagnostic products and processes which are based upon a combination of living cells and biomaterials was defined as a field only a few years ago 1988 Tissue engineering is an inherently interdisciplinary field combining bioengineering life sciences and clinical sciences The definition of this area of work as the field of tissue engineering brought together scientists from multiple backgrounds who already were working toward the achievement of similar goals Why a book series exclusively devoted to tissue engineering The field of tissue engineering is heterogeneous The cells involved in tissue engineering can be autologous allogeneic or xenogeneic The biomaterials utilized can be either naturally occurring synthetic or a combination of both The application of the technology can be either for acute or permanent purposes An attempt to cover the field of tissue engineering in a single volume with the degree of detail necessary for individuals with different scientific backgrounds and disciplines would be a difficult task to accomplish particularly when this field is just emerging and changing rapidly Therefore addressing different technologies within the field of tissue engineering in a comprehensive manner is the main mission of this series of volumes A stellar group of scientists has been brought together to form the editorial board of the series

Scaffolding In Tissue Engineering Peter X. Ma, Jennifer Elisseeff, 2005-08-19 The growing interest in scaffolding design and increasing research programs dedicated to regenerative medicine corroborate the need for Scaffolding in Tissue Engineering While certain books and journal articles address various aspects in the field this is the first current comprehensive text focusing on scaffolding for tissue engineering

Advanced Polymers in Medicine Francesco Puoci, 2014-12-02 The book provides an up to date overview of the diverse medical applications of advanced polymers The book opens by presenting important background information on polymer chemistry and physicochemical characterization of polymers This serves as essential scientific support for the subsequent

chapters each of which is devoted to the applications of polymers in a particular medical specialty The coverage is broad encompassing orthopedics ophthalmology tissue engineering surgery dentistry oncology drug delivery nephrology wound dressing and healing and cardiology The development of polymers that enhance the biocompatibility of blood contacting medical devices and the incorporation of polymers within biosensors are also addressed This book is an excellent guide to the recent advances in polymeric biomaterials and bridges the gap between the research literature and standard textbooks on the applications of polymers in medicine Natural-Based Polymers for Biomedical Applications Rui L. Reis,Nuno M.

Neves,Joao F. Mano,Manuela E. Gomes,Alexandra P. Marques,Helena S. Azevedo,2008-08-15 Polymers from natural sources are particularly useful as biomaterials and in regenerative medicine given their similarity to the extracellular matrix and other polymers in the human body This important book reviews the wealth of research on both tried and promising new natural based biomedical polymers together with their applications as implantable biomaterials controlled release carriers or scaffolds for tissue engineering The first part of the book reviews the sources processing and properties of natural based polymers for biomedical applications Part two describes how the surfaces of polymer based biomaterials can be modified to improve their functionality The third part of the book discusses the use of natural based polymers for biodegradable scaffolds and hydrogels in tissue engineering Building on this foundation Part four looks at the particular use of natural gelling polymers for encapsulation tissue engineering and regenerative medicine The penultimate group of chapters reviews the use of natural based polymers as delivery systems for drugs hormones enzymes and growth factors The final part of the book summarises research on the key issue of biocompatibility Natural based polymers for biomedical applications is a standard reference for biomedical engineers those studying and researching in this important area and the medical community Examines the sources processing and properties of natural based polymers for biomedical applications Explains how the surfaces of polymer based biomaterials can be modified to improve their functionality Discusses the use of natural based polymers for hydrogels in tissue engineering and in particular natural gelling polymers for encapsulation and regenerative medicine Ligament Tissue Engineering Using Synthetic Biodegradable Polymer Fiber Scaffolds Victor S. Lin,1998
