International Conference on Digital Enterprise Technology George Q. Huang, K.L. Mak, Paul G. Maropoulos, 2009-12-12 This Proceedings volume contains articles presented at the CIRP Sponsored International Conference on Digital Enterprise Technology DET2009 that takes place December 14-16 2009 in Hong Kong This is the 6th DET conference in the series and the first to be held in Asia Professor Paul Maropoulos initiated hosted and chaired the 1st International DET Conference held in 2002 at the University of Durham Since this inaugural first DET conference DET conference series has been successfully held in 2004 at Seattle Washington USA in 2006 at Setubal Portugal in 2007 at Bath England and in 2008 at Nantes France The DET2009 conference continues to bring together International expertise from the academic and industrial fields pushing forward the boundaries of research knowledge and best practice in digital enterprise technology for design and manufacturing and logistics and supply chain management Over 120 papers from over 10 countries have been accepted for presentation at DET2009 and inclusion in this Proceedings volume after stringent refereeing process On behalf of the organizing and program committees the Editors are grateful to the many people who have made DET2009 possible to the authors and presenters especially the keynote speakers to those who have diligently reviewed submissions to members of International Scientific Committee Organizing Committee and Advisory Committees and to colleagues for their hard work in sorting out all the arrangements We would also like to extend our gratitude to DET2009 sponsors co organizers and supporting organizations Digital Capitalism and New Institutionalism Daniil Frolov, 2023-12-19 Modern institutional economics was

created to study the institutions of pre digital economies and is based on reductionist approaches But digital capitalism is producing institutions of unprecedented complexity This book argues therefore that not only the economic institutions themselves but also the theoretical foundations for studying those institutions must now be adapted to digital capitalism The book focuses on the institutional complexity of digital capitalism developing an interdisciplinary framework which brings together cutting edge theoretical approaches from philosophy first of all object oriented ontology sociology especially actor

network theory evolutionary biology and cognitive science In particular the book outlines a new approach to the study of institutional evolution based on extended evolutionary synthesis a new paradigm in evolutionary biology which is now replacing neo Darwinism The book develops an enactivist notion of extended cognition and cognitive institutions rejecting the individualistic and mechanistic understanding of economic rationality in digital environments The author experiments with new philosophical approaches to investigate institutional complexity for example the ideas of the flat ontology and the assemblage theory The flat ontology approach is applied to the study of human robot institutions as well as to thinking about post anthropocentric institutional design Assemblage thinking allows for a new much less idealistic look at blockchain and smart cities Blockchain as digital institutional technology is considered in the book not from the viewpoint of minimizing transaction costs as is customary in the modern institutional economics but by using the theory of transaction value which focuses on improving the quality of digital transactions The book includes a wide range of examples ranging from metaverses cryptocurrencies and big data to robot rules smart contracts and machine learning algorithms Written for researchers in institutional economics and other social sciences this interdisciplinary book is essential reading for anyone interested in the interplay of institutional and digital change
