**Representation Theory and Harmonic Analysis on Symmetric Spaces** Jens Gerlach Christensen, Susanna Dann, Matthew Dawson, 2018-08-27 This volume contains the proceedings of the AMS Special Session on Harmonic Analysis in honor of Gestur lafsson's 65th birthday held on January 4 2017 in Atlanta Georgia The articles in this volume provide fresh perspectives on many different directions within harmonic analysis highlighting the connections between harmonic analysis and the areas of integral geometry complex analysis operator algebras Lie algebras special functions and differential operators The breadth of contributions highlights the diversity of current research in harmonic analysis and shows that it continues to be a vibrant and fruitful field of inquiry

*Schubert Calculus and Its Applications in Combinatorics and Representation Theory* Jianxun Hu, Changzheng Li, Leonardo C. Mihalcea, 2020-10-24 This book gathers research papers and surveys on the latest advances in Schubert Calculus presented at the International Festival in Schubert Calculus held in Guangzhou China on November 6 10 2017 With roots in enumerative geometry and Hilbert's 15th problem modern Schubert Calculus studies classical and quantum intersection rings on spaces with symmetries such as flag manifolds The presence of symmetries leads to particularly rich structures and it connects Schubert Calculus to many branches of mathematics including algebraic geometry combinatorics representation theory and theoretical physics For instance the study of the quantum cohomology ring of a Grassmann manifold combines all these areas in an organic way The book is useful for researchers and graduate students interested in Schubert Calculus and more generally in the study of flag manifolds in relation to algebraic geometry combinatorics representation theory and mathematical physics

*Bilinear Forms and Zonal Polynomials* Arak M. Mathai, Serge B. Provost, Takeshi Hayakawa, 2012-12-06 The book deals with bilinear forms in real random vectors and their generalizations as well as zonal polynomials and their applications in handling generalized quadratic and bilinear forms The book is mostly self contained It starts from basic principles and brings the readers to the current research level in these areas It is developed with detailed proofs and illustrative examples for easy readability and self study Several exercises are proposed at the end of the chapters The complicated topic of zonal polynomials is explained in detail in this book The book concentrates on the theoretical developments in all the topics covered Some applications are pointed out but no detailed application to any particular field is attempted This book can be used as a textbook for a one semester graduate course on quadratic and bilinear forms and or on zonal polynomials It is hoped that this book will be a valuable reference source for graduate students and research workers in the areas of mathematical statistics quadratic and bilinear forms and their generalizations zonal polynomials invariant polynomials and related topics and will benefit statisticians mathematicians and other theoretical and applied scientists who use any of the above topics in their areas Chapter 1 gives the preliminaries needed in later chapters including some Jacobians of matrix transformations Chapter 2 is devoted to bilinear forms in Gaussian real random vectors their properties and techniques specially developed to deal with

bilinear forms where the standard methods for handling quadratic forms become complicated

**Infinite Families of Exact Sums of Squares Formulas, Jacobi Elliptic Functions, Continued Fractions, and Schur Functions** Stephen C. Milne, 2013-11-27 The problem of representing an integer as a sum of squares of integers is one of the oldest and most significant in mathematics It goes back at least 2000 years to Diophantus and continues more recently with the works of Fermat Euler Lagrange Jacobi Glaisher Ramanujan Hardy Mordell Andrews and others Jacobi's elliptic function approach dates from his epic *Fundamenta Nova* of 1829 Here the author employs his combinatorial elliptic function methods to derive many infinite families of explicit exact formulas involving either squares or triangular numbers two of which generalize Jacobi's 1829 4 and 8 squares identities to  $4n^2$  or  $4n(n-1)$  squares respectively without using cusp forms such as those of Glaisher or Ramanujan for 16 and 24 squares These results depend upon new expansions for powers of various products of classical theta functions This is the first time that infinite families of non-trivial exact explicit formulas for sums of squares have been found The author derives his formulas by utilizing combinatorics to combine a variety of methods and observations from the theory of Jacobi elliptic functions continued fractions Hankel or Turanian determinants Lie algebras Schur functions and multiple basic hypergeometric series related to the classical groups His results in Theorem 5.19 generalize to separate infinite families each of the 21 of Jacobi's explicitly stated degree 2 4 6 8 Lambert series expansions of classical theta functions in sections 40-42 of the *Fundamenta Nova* The author also uses a special case of his methods to give a derivation proof of the two Kac and Wakimoto 1994 conjectured identities concerning representations of a positive integer by sums of  $4n^2$  or  $4n(n-1)$  triangular numbers respectively These conjectures arose in the study of Lie algebras and have also recently been proved by Zagier using modular forms George Andrews says in a preface of this book This impressive work will undoubtedly spur others both in elliptic functions and in modular forms to build on these wonderful discoveries Audience This research monograph on sums of squares is distinguished by its diversity of methods and extensive bibliography It contains both detailed proofs and numerous explicit examples of the theory This readable work will appeal to both students and researchers in number theory combinatorics special functions classical analysis approximation theory and mathematical physics
