

SYSWELD in the Virtual Try-Out Space

SYSWELD is not only a simulation tool, it is also a design optimization tool, created to help you gain competitive advantage.

Paving the way towards the digital factory

Companies within the heat treatment, welding and assembly markets face high pressure to reduce costs and lead times, as well as to increase part quality. These objectives can be achieved by focusing on manufacturing process optimization and part improvement. To better respond to industrial constraints, ESI Group pursues its continuous collaborative development of SYSWELD and helps engineers to reduce the number of prototypes leading to the migration towards the digital factory.

Chaining stamping and welding simulation

ESI Group's value chain for Virtual Manufacturing products includes PAM-STAMP; the integrated stamping solution to master the complete manufacturing chain from die design feasibility to stamping validation and optimization. Chaining with SYSWELD brings state-of-the-art manufacturing prediction.

Chaining SYSWELD and PAM-STAMP

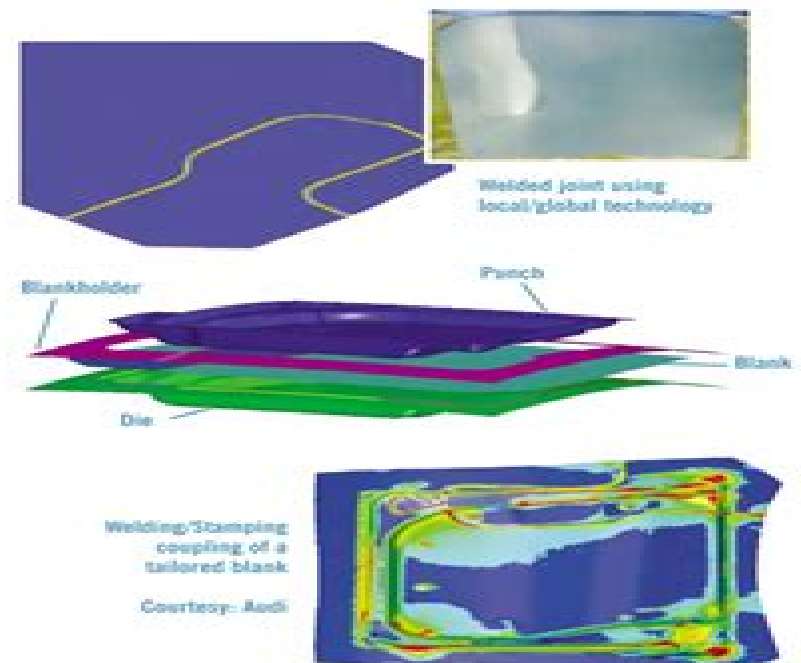

Welding tailored blanks generates material changes around the welding joints that influences the stamping behavior. Chaining SYSWELD and PAM-STAMP provides the user with key data about changes in material properties like yield stress reduction. The residual stresses from welding are taken into account for the spring back simulation.

Benefits:

- Improved products and tooling design
- More accurate process simulation
- Reduced tooling modifications

Chaining PAM-STAMP and SYSWELD

Welding stamped components made from aluminum and steel alloy is today the mission-critical operation for body-in-white and suspension systems. Combining PAM-STAMP and SYSWELD brings an accurate assessment of real blank thickness, change in material, distortions, residual stresses and residual plastic strains.
