Geo-Logic Robert Frodeman,2012-02-01 Using a unified vision of geology consisting of equal parts geo poetry geo politics geo theology and geo science Geo Logic redraws the boundaries between philosophy and the earth sciences Although each discipline makes crucial contributions to contemporary environmental concerns neither will fulfill its potential until it transforms itself by engaging the other This book offers examples of how to relate environmental philosophy to science public policy and real world problems and shows what is epistemologically distinctive about scientific work and how to respond to the cultural dynamics that are pulling these issues into the public sphere Frodeman advocates humanizing the earth sciences and bringing philosophy into the field

Drawing Out Leviathan

Keith M. Parsons,2001-10-01 are dinosaurs social constructs Do we really know anything about dinosaurs Might not all of our beliefs about dinosaurs merely be figments of the paleontological imagination A few years ago such questions would have seemed preposterous even nonsensical Now they must have a serious answer At stake in the Science Wars that have raged in academe and in the media is nothing less than the standing of science in our culture One side argues that science is a social construct that it does not discover facts about the world but rather constructs artifacts disguised as objective truths This view threatens the authority of science and rejects science's claims to objectivity rationality and disinterested inquiry Drawing Out Leviathan examines this argument in the light of some major debates about dinosaurs the case of the wrong headed dinosaur the dinosaur heresies of the 1970s and the debate over the extinction of dinosaurs Keith Parsons claims that these debates though lively and sometimes rancorous show that evidence and logic not arbitrary rules of the game remained vitally important even when the debates were at their nastiest They show science to be a complex set of activities pervaded by social influences and not easily reducible to any stereotype Parsons acknowledges that there are lessons to be learned by scientists from their would be adversaries and the book concludes with some recommendations for ending the Science Wars

plesiosaurs and mosasaurs who swam the ancient oceans and who may according to some still frequent the likes of Loch Ness animal that looked like a crocodile crossed with a shark the size of a small yacht With its impossibly long neck Plesiosaurus conybeari has been compared to a giant snake threaded through the body of a turtle At a length of nearly 60 feet Mosasaurus hoffmanni boasted powerful jaws that could crunch up even the hardest shelled giant sea turtle And Kronosaurus queenslandicus perhaps the most formidable of the lot had a skull nine feet long more than twice that of Tyrannosaurus rex with teeth to match reconstruct their lives and habitats Their fossils have been found all over the world in Europe Australia Japan and even Kansas in lands that once lay on the floors of Jurassic and Triassic seas Along the way the book also provides intriguing insights into and entertaining tales about the work discoveries and competing theories that compose the world of vertebrate paleontology The text is also accompanied by Ellis own illustrations of how these creatures probably appeared and through these likenesses we are invited to speculate on their locomotion their predatory habits and their lifestyles

Aquagenesis Richard Ellis, 2001 Ellis's detailed drawings bring animals to life that have not been seen for 400 million years some that rival science fiction monsters for sheer weirdness Early crocodiles and turtles were three times larger than they are today and there was once a manatee that was 30 feet long and had no bones below the elbow There were the trilobites jointed animals with complex eyes that dominated the seas for 200 million years and then completely disappeared sharks with teeth on their backs and others 50 feet long with teeth the size of your hand Fifty million years ago some land dwelling mammals reentered the water and began the process of modification that turned them into whales It was the most astonishing transformation in mammalian history In Aquagenesis you will track these changes and meet the paleontologists who have found the links between the terrestrial mammals and the first semiaquatic whales creatures that probably looked like hyenas huge shrews or fat otters Today the only animal on earth that regularly walk in an upright two legged stance are penguins and people It is possible that our size shape stride intelligence and hair or lack thereof can also be explained by the provocative theory of the aquatic ape **BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved**
